NNORSY-GOME Processing Model

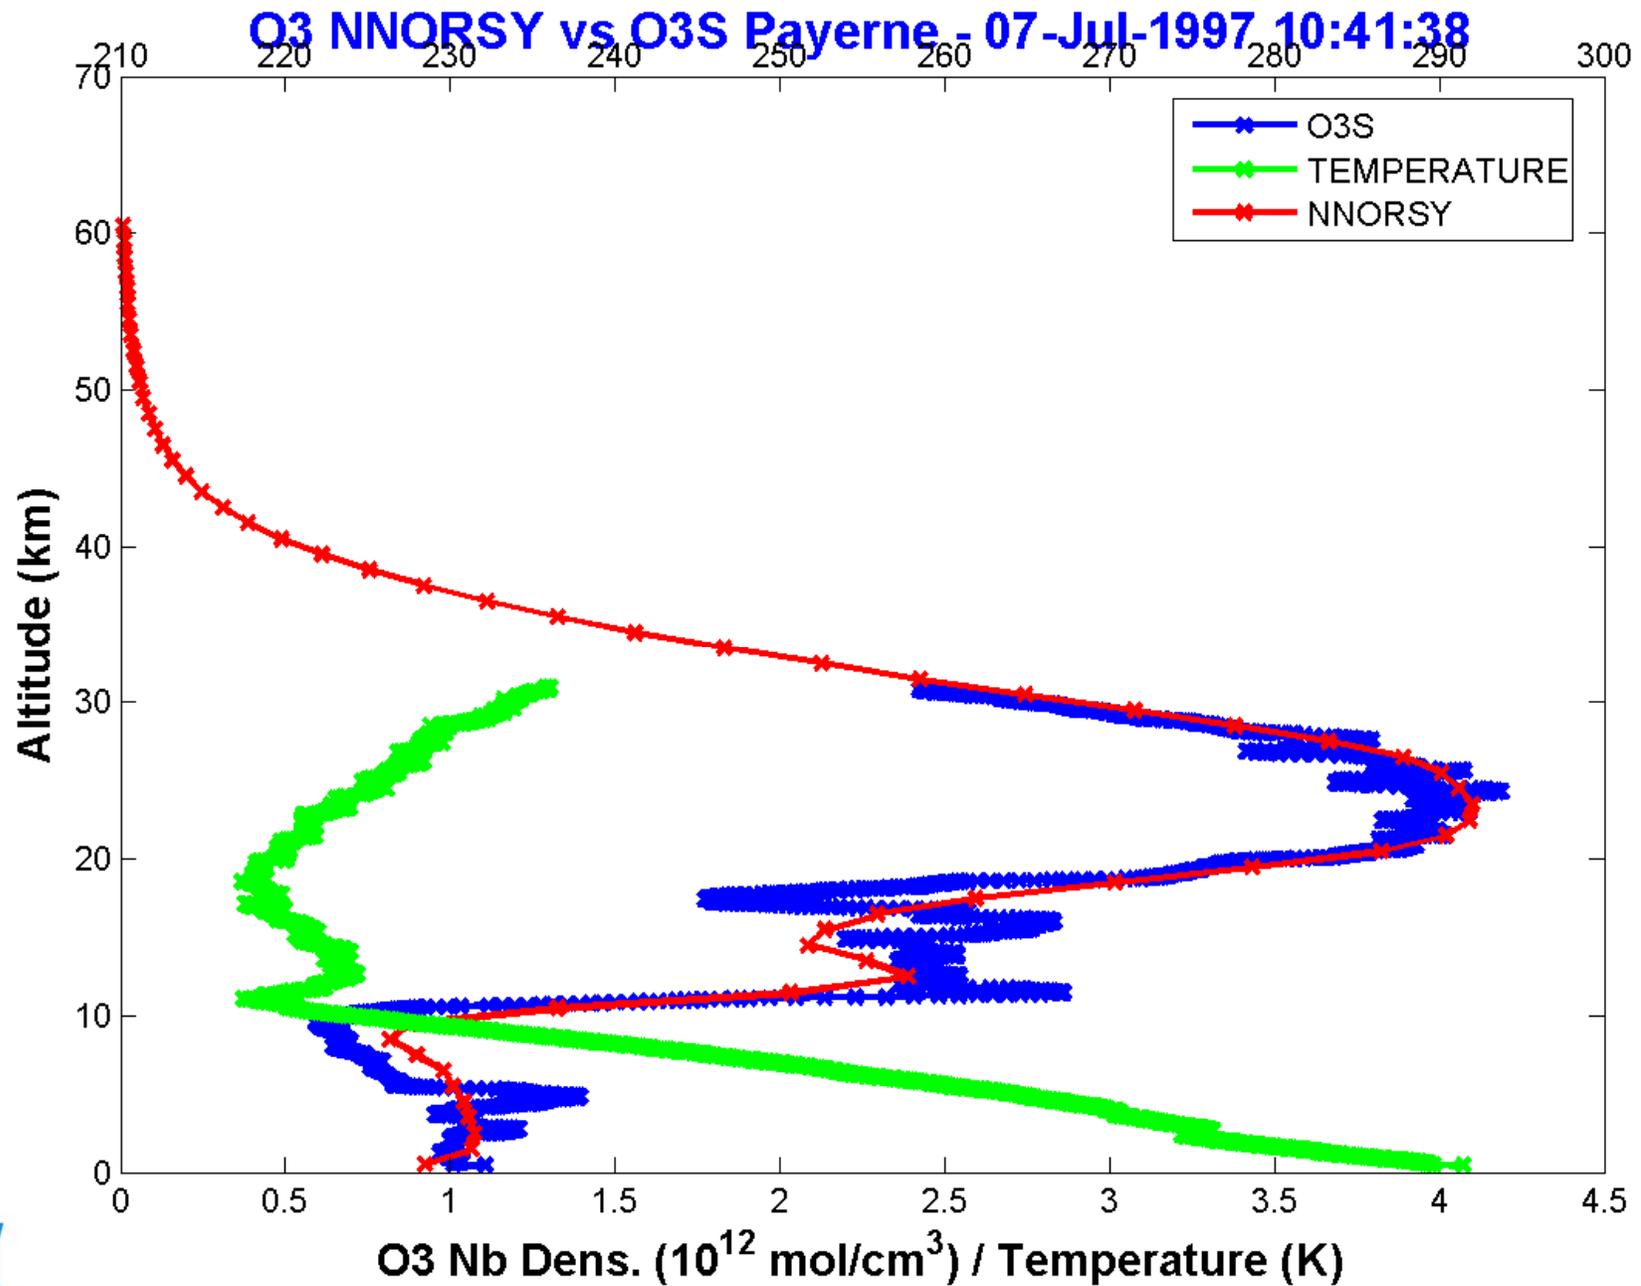

NNORSY-GOME Ozone Profile Data Set

Temporal coverage
Start Date: 09/01/1995
End Date: 05/31/2003
Number of Orbits/Profiles: 36694/48.579.769
Level 2 Profiles
Minimum Altitude: surface
Maximum Altitude: 61 km
Vertical Sampling: 1 km
Ozone Number Density: $1e18/m^3$
Ozone Error: %

Correlative Analysis: 40° S / New Zealand

Validation with Data Assimilation

Why

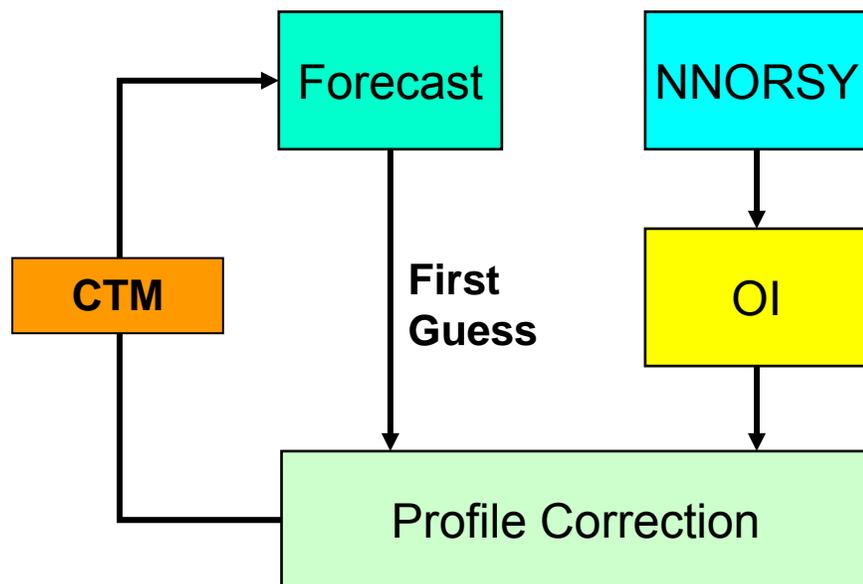

- Global quality control by first guess and error statistics
- Identification of outlier or systematic errors
- Check of retrievals for areas of known GOME problems (SAA)
- Grid parameter:

CTM Model

- Based on ROSE/DLR assimilation system, Version 3.0 (Baier et al., 2006)
- Horizontal optimum interpolation scheme with analyzed error (Kalman Filter)
- Comprises all relevant chemical and dynamical processes of stratosphere
- DA system driven by UK Met Office wind and temperature fields
- Grid parameter:
 - Vertical coverage: 1000 – 0.1 hPa
 - Vertical discretisation: 43 Levels
 - Horizontal resolution: 2.5° x 3.75° resolution

Data Assimilation Overview

Input = NNORSY-GOME retrievals

Output = 3D global ozone analysis

NNORSY-GOME: Summary

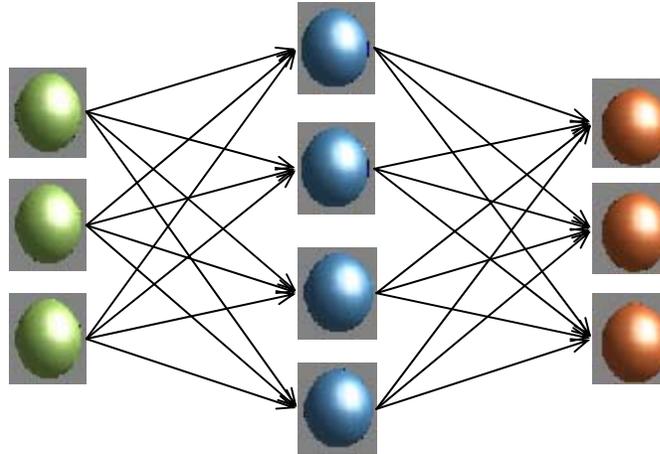

- ▶ Almost 10 year global NNORSY-GOME ozone profile data set
- ▶ Geophysical validation and comparison with sonde/lidar/satellite
- ▶ Validation and global consistency check with data assimilation
- ▶ Various tropospheric ozone column products
- ▶ NNORSY compensate for instrument degradation
- ▶ New dynamic ozone profile climatology
- ▶ All products and data are available: <http://nnorsy.zsw-bw.de>
- ▶ Extending GOME ozone profile data record with SCIAMACHY

- ▶ NNORSY application to SCIAMACHY nadir
