Introduction: Who we are

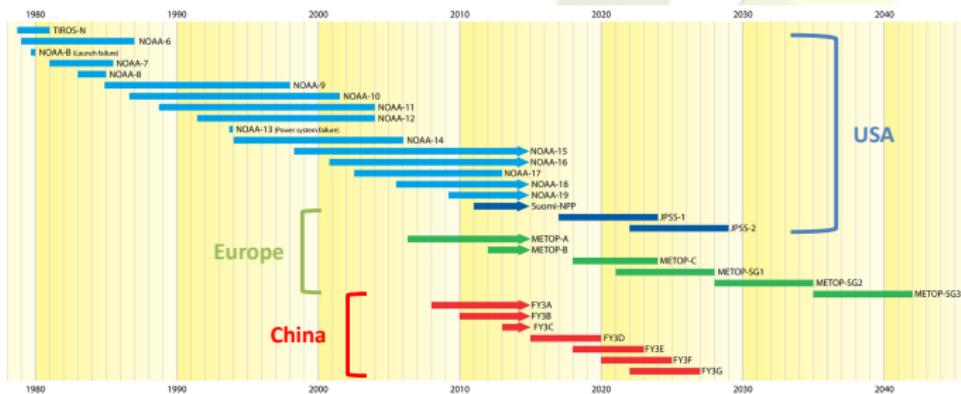

The Met Office (MO) Satellite Radiance Assimilation Group (SRAG)

- ▶ Manage Infrared and Microwave sounding data from: AIRS, ATOVS, ATMS, CrIS, IASI, and SSMIS.
- ▶ Maintain processing system for operational assimilation into the MO models.
- ▶ Carry out research to improve and extend data applications.
- ▶ Investigate the introduction of new instruments. Here, the MicroWave Humidity Sounders (MWHS) on board China's FY-3 platforms.

This work is supported by the European Horizon-2020 GAIA-CLIM project and the CSSP:China program, in collaboration with the NSMC-CMA.

Introduction: Source of data

Sounding missions supporting NWP and climate monitoring.

FY-3 polar orbiting satellites will become a major source of data for NWP and climate monitoring over the next decades.

Assimilation experiments

MWHS-1 and -2 are integrated into a full system, low resolution (N320), for assimilation experiments in the MO global system.

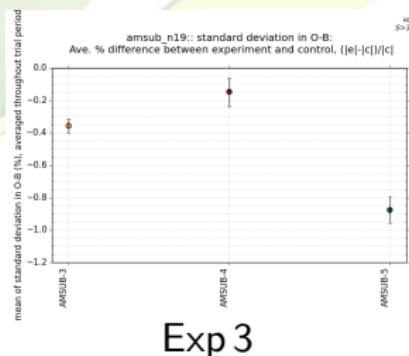

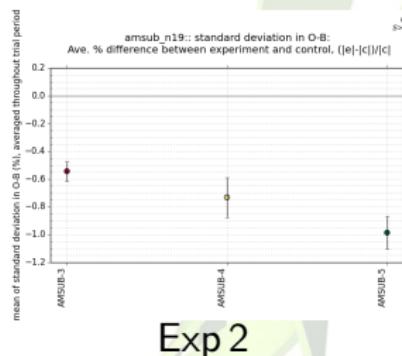

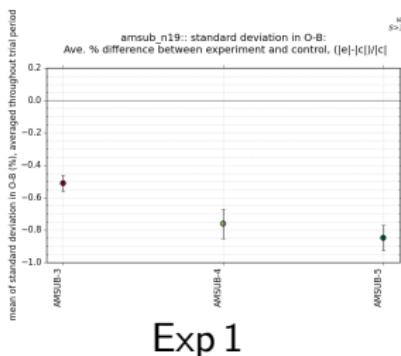

- ▶ Exp 1 MWHS-2 with static bias correction scheme 49 days long
- ▶ Exp 2 MWHS-2 with variational bias correction scheme 23 days long
- ▶ Exp 3 MWHS-1 with variational bias correction scheme 62 days long

Assimilation experiments

Change in standard deviation of the fit to the model background for MHS-NOAA19 (relative to the control).

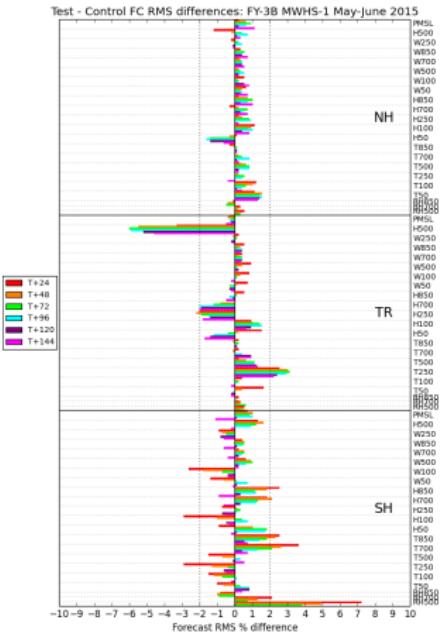

Assimilation experiments: Exp 1 (MWHS-2 with static BC)

Similar improvement for other sounders in Exp 1 (and 2) ...

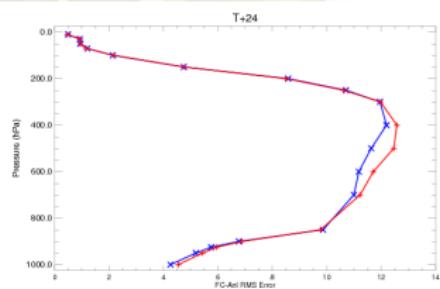

Assimilation experiments: Exp 3 (MWHS-1 with VarBC)

... But mixed picture in Exp 3.

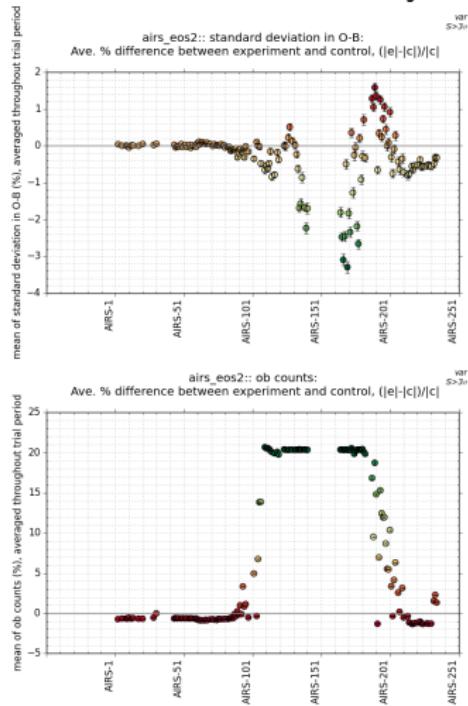

Significant degradation in Relative Humidity in lower and mid-troposphere.

Assimilation experiments: Exp 3 (MWHS-1 with VarBC)

Could we indirectly introduce bad data? (Hypothesis)

1D-Var RH – RH_{bg}

Concluding remarks

- ▶ MWHS-2 (likely) to be operationally assimilated in the next MO system update.
- ▶ MWHS-1 operational use postponed until we work out RH issues.

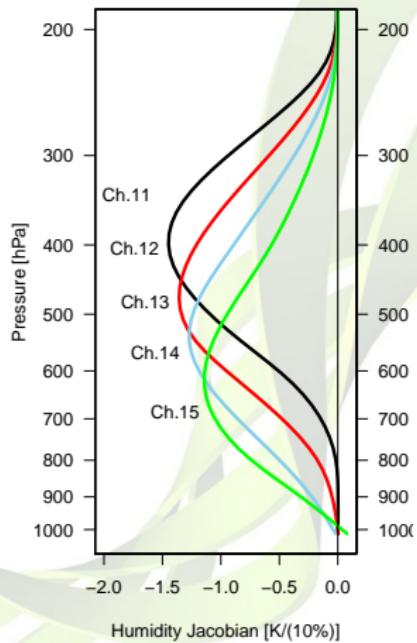

Future work

- ▶ Further investigate MWHS-1 impact on relative humidity.
- ▶ Test the assimilation of MWHS-1 and -2 183 GHz over land.
- ▶ Test MWHS-2 118 GHz channels.
