Outline

- **Background of the study**
 - ◆ **It's a time to start the work**
- **Model bias or Observation bias?**
 - ◆ **$dT_b \sim H(dx_a) \rightarrow \langle O-B \rangle$ are mainly due to model bias**
- **Experiments**
 - ◆ **Baseline**
 - ◆ **Baseline+SBUV+OMI**
 - ◆ **Baseline+IASI ozone channels**
- **Verification against independent observations**
 - ◆ **MLS and sonde**
- **Summary and Discussions**

Background

- **Ozone analysis**

- ◆ **Importance**

- Assimilation of radiances (IR channels)
 - Stratosphere(T,O₃,wind), medium-range weather forecast
 - Reanalysis and Climate study

- ◆ **Difficulty: There is NO unbiased obs. as backbone**

- Observation:Realtime:(SBUV,OMI),Delay: (Sonde,MLS)
 - Model: simple photochemistry model(bias)

- **IASI observation information**

- ◆ **321 ozone channels at 9.6um**

- ◆ **Global and All day coverage, esp. for polar night**

- ◆ **Improved RT model**

- ◆ **Cloud detection (QC for IR)**

The key issues

- **Model bias**

- ◆ **simple photochemistry model(bias)**

- **Observation bias**

- ◆ **Cal/Val**

- ◆ **Non perfect Cloud Detection**

- ◆ **RT model bias**

- **No anchoring**

- ◆ **NO realtime unbiased Ozone Obs. AS BACKBONE**

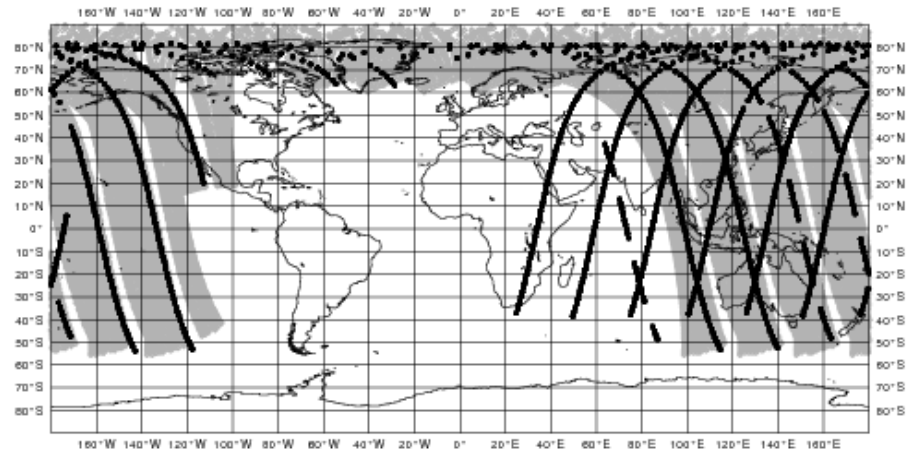

- **Anchoring VARBC against model biases**

- ◆ **Prior constraint on the Anchoring channel**

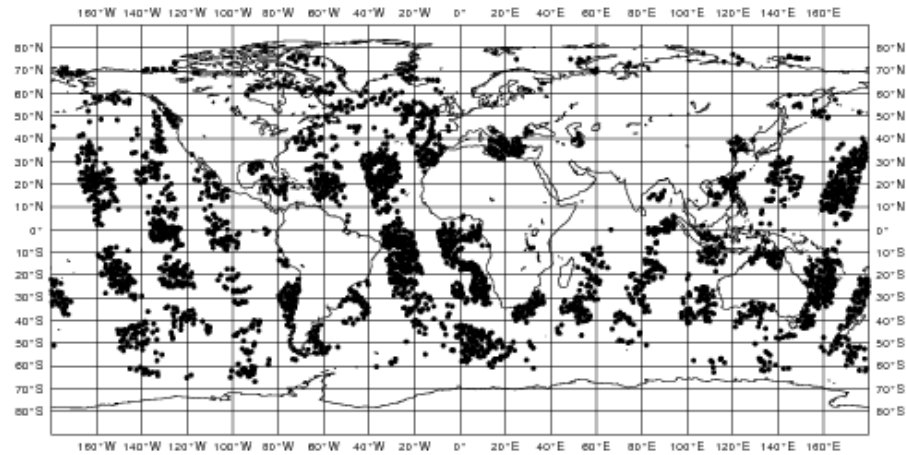

- ◆ **VARBC to remove the interchannel bias**

Jacobians and Active Channels

BIAS analysis: OBS or BACKGROUND?

- **Operational against sonde**

- ◆ **3 months**

- **IASI O3 channel FG departures**

- ◆ **In Spectral space**

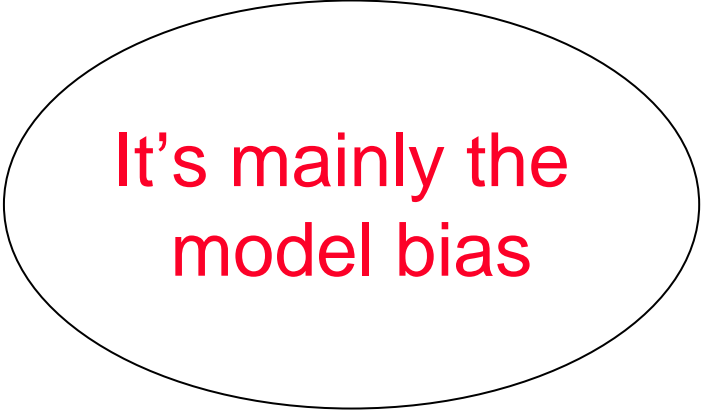

- ◆ **Geophysical and Seasonal Variation**

- ◆ **Compare with other Channels**

- **Offline RTTOV**

- ◆ **H: $dO_3 \rightarrow dT_b$**

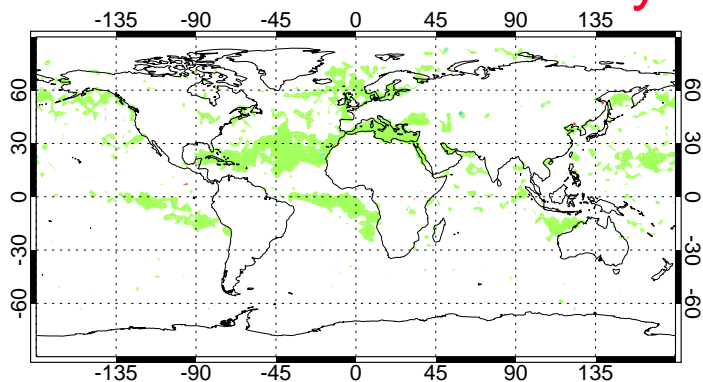

- ◆ **1DVAR: $dT_b \rightarrow dO_3$**

It's mainly the
model bias

Summary and Discussions

- **BIAS analysis: OBS or BACKGROUND?**

- ◆ **the Bias is mainly from BACKGROUND: 75% VS 25%**

- Activate the IR O3 channel in assimilation

- Anchoring VarBC against model bias

- **Experiment Results**

- ◆ **VERIFY against independent obs.**

- SONDE: only about 10 stations, but better at UTLS

- MLS: better in S.H and N.H. There is problem in Tropics

- ◆ **Impact on other sounding channels**

- IASI 290: improved the fit

- ◆ **Polar night**

- **Future work**

- ◆ **Bias Correction, Anchoring, UV+IR, Wind Coupling**
