

NOAA/NESDIS UPDATES FOR SOUNDING DATA PRODUCTS AND SERVICES

Tony Reale, AK Sharma, Michael Chalfant, Mitch Goldberg, Chris Barnet, Fuzhong Weng,
Vince Tabor
NOAA/NESDIS, Camp Springs, land, Md.
(tony.reale@noaa.gov)

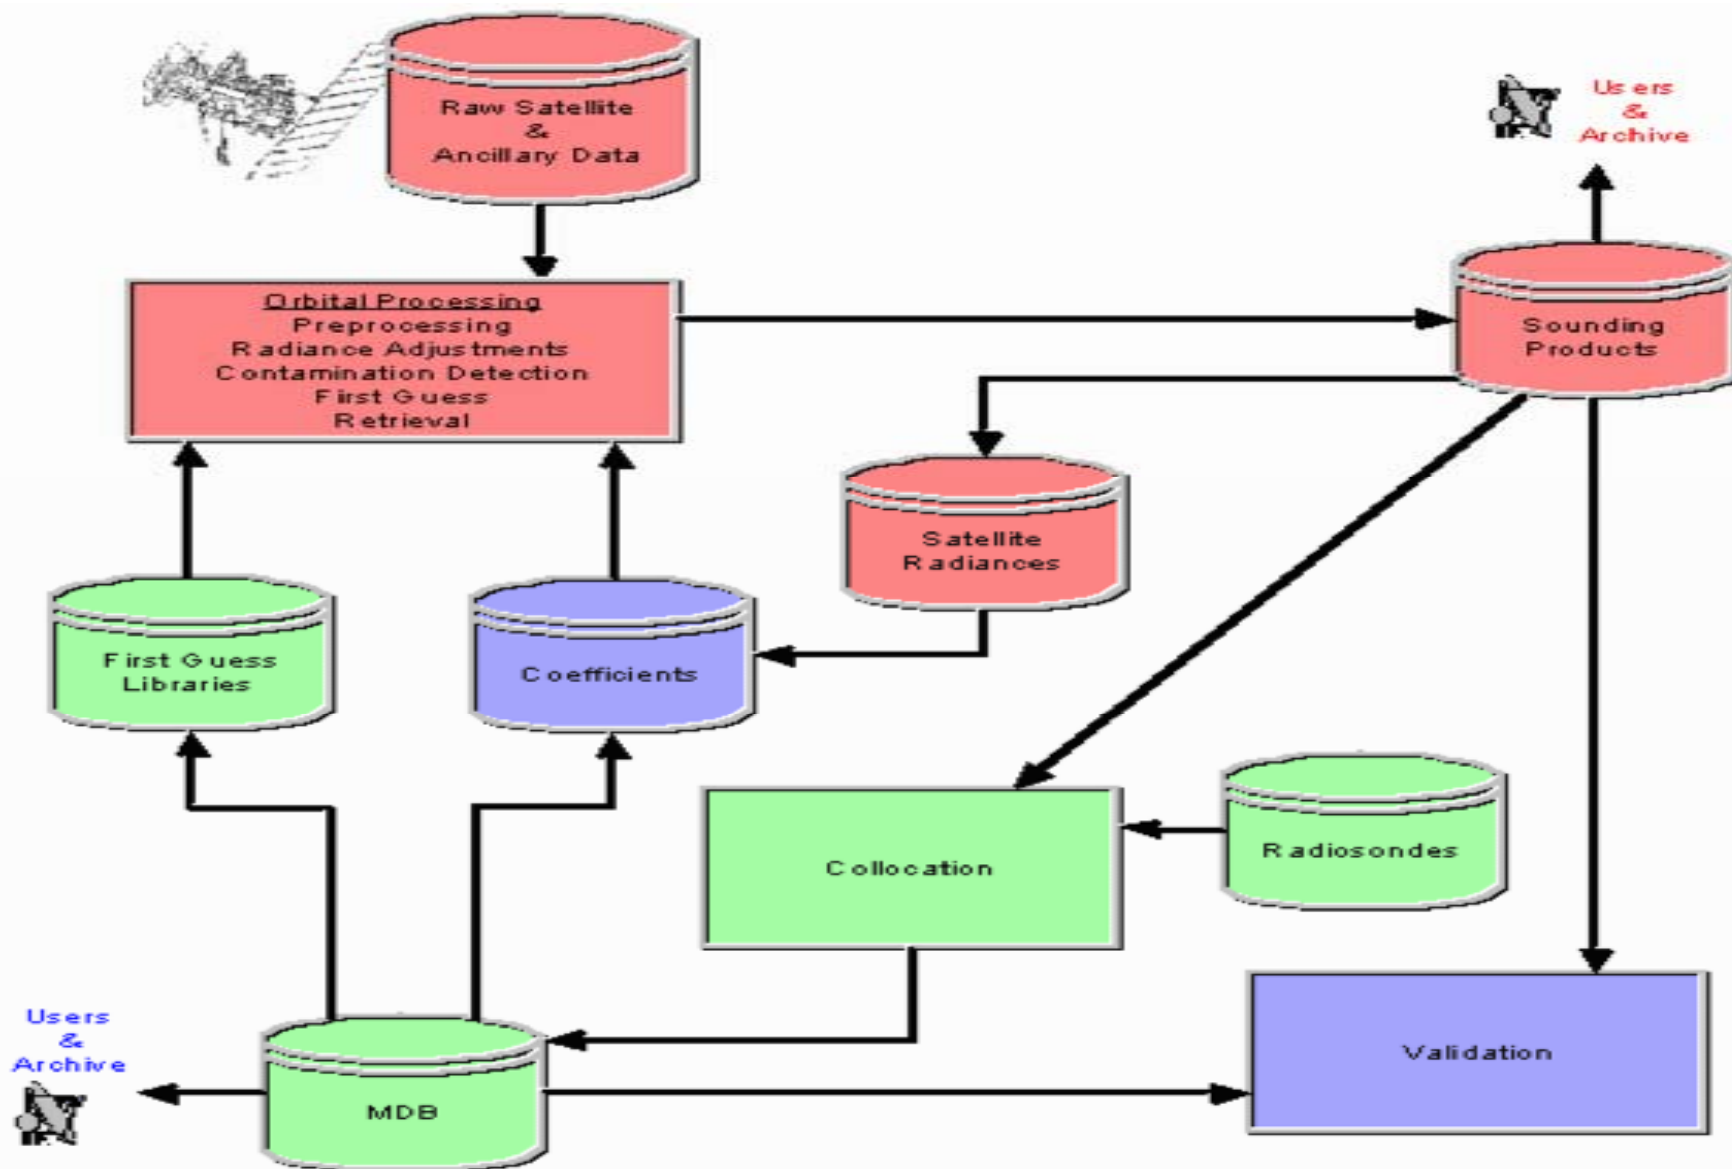

Frank Tilley, Gene Kratz, Americo Allegrino, Mike Ferguson, Gary Gray, Michael Pettey,
Raytheon-ITSS

Murty Divakarla, Walter Wolf
STG Inc.

International TOVS Study Conference-14
Beijing, China
May 25-31, 2005

ATOVS Processing Diagram ... **Orbital**, **Daily**, **Weekly**

SOUNDING USERS (short list)

- NWP
 - DOD (NRL)
 - Germany (DWD)
 - Canada (AES)
 - Japan (JMA)
 - Brazil (INPE)
- Climate
 - NCEP (CDAS),
 - Germany (DWD)
- NOAA
 - AWIPS (NWS)
 - Cloud Products (NESDIS) ...
- Others ...

Daily Satellite Data Volume Ingest

- **NOAA Polar**
 - NOAA-15, 16 & 17 6.3GB
- **GOES**
 - GOES East/West 35.0GB
- **DMSP**
 - F13, 14 & 15 1.7GB
- **Non-NOAA Satellites**
 - METEOSAT 5 (INDOEX) .4GB
 - TRMM 1.3GB
 - MODIS 175.0GB
 - AIRS .6GB
 - ERS 2 .2GB
 - QuikSCAT .4GB
 - GMS .1GB
 - METEOSAT 7 .8GB
 - RadarSat 5.0GB
 - Seawifs (not included in total, must be ordered)

232.2 GB

Upcoming Launches

- NOAA-N
 - NOAA-N Launched: May 20, 2005
- METOP Launch Date: Summer 2007
- NPP Launch Date: ??
- NOAA-N' Launch Date: March 2008
- NPOESS Launch: 2009
- Second Metop Launch Date: August 2010

NOAA-N Instrument Schedule

- AMSU A1 5/24 17Z
- AMSU A2 5/24 19Z
- MHS 5/25 14Z
- SBUV 5/27 15Z
- DCS 5/27 17Z
- AVHRR 6/5 14Z
- HIRS 6/5 15Z
- SEM 6/6 15Z

NOAA-N/N' Changes

- MHS will replace AMSU-B
- Field of View Size Change for HIRS (17Km to 10Km)
- HIRS specify calibration and format changes
- AMSU-A specify calibration and format changes
- AVHRR specify format change
- Other 1b/1b* format changes
- New Telemetry data file

Initial Joint Polar System Products Overview

- Level 1 Products Created at NOAA
 - AVHRR
 - AMSU-A
 - HIRS
 - MHS
 - SBUV
 - SEM
 - [A]DCS
 - SAR
- Level 1 Products Obtained from EUMETSAT
 - ASCAT
 - IASI
 - GOME
 - GRAS

Product Processing Changes

Product Generation

Level 1 Data

Levels 2 and 3

SATEPS (SSD)

Snow/ Ice •AVHRR	Hazards Fire/Smoke Volcanic Ash •AVHRR	Heavy Precip •AMSU-A
----------------------------	--------------------------------------------------	--------------------------------

Significant Event Imagery •AVHRR	Tropical Cyclone Analysis •AVHRR •AMSU-A
--------------------------------------------	-------------------------------------------------------

CEMSCS (IPD)

Aerosol •AVHRR	Global Vegetation •AVHRR	Cloud Imagery •AVHRR	Global Sea Surface Temp •AVHRR •HIRS/4	Local Sea Surface Temp •AVHRR	MW Surface/Hydro •AMSU-A •MHS
--------------------------	------------------------------------	--------------------------------	-----------------------------------------------------	-----------------------------------------	--------------------------------------------

Radiation Budget •AVHRR •HIRS/4	Soundings •AVHRR •AMSU-A •HIRS/4 •MHS	Ozone •SBUV/2 •GOME-2	Cloud Flags •AVHRR	Advanced Soundings •IASI	Ocean Surface Winds/Sea Ice •ASCAT
----------------------------------------------	----------------------------------------------------------	------------------------------------	------------------------------	------------------------------------	----------------------------------------------

Other

Sea Ice (NIC) •AVHRR	Space Environment (SEC) •SEM-2
--------------------------------	------------------------------------------

Data Collection •DCS	Search and Rescue •SAR
--------------------------------	----------------------------------

User Interfaces (Servers, Web Pages, GTS, NWS Gateway, etc.)

- ▲ Possible upgrades to use AVHRR global 1-km data from Metop
- ▲ New product systems
- ▲ Upgrade for pipeline processing

Pipeline Processing: Descending Pass Example

Area of Interest
(AOI)

Descending Orbit

Orbital
File
Available

AOI product generation begins ~45 minutes sooner
in pipeline vs orbital processing

Open Issues

User receipt of IJPS products

Shared Processing requirements

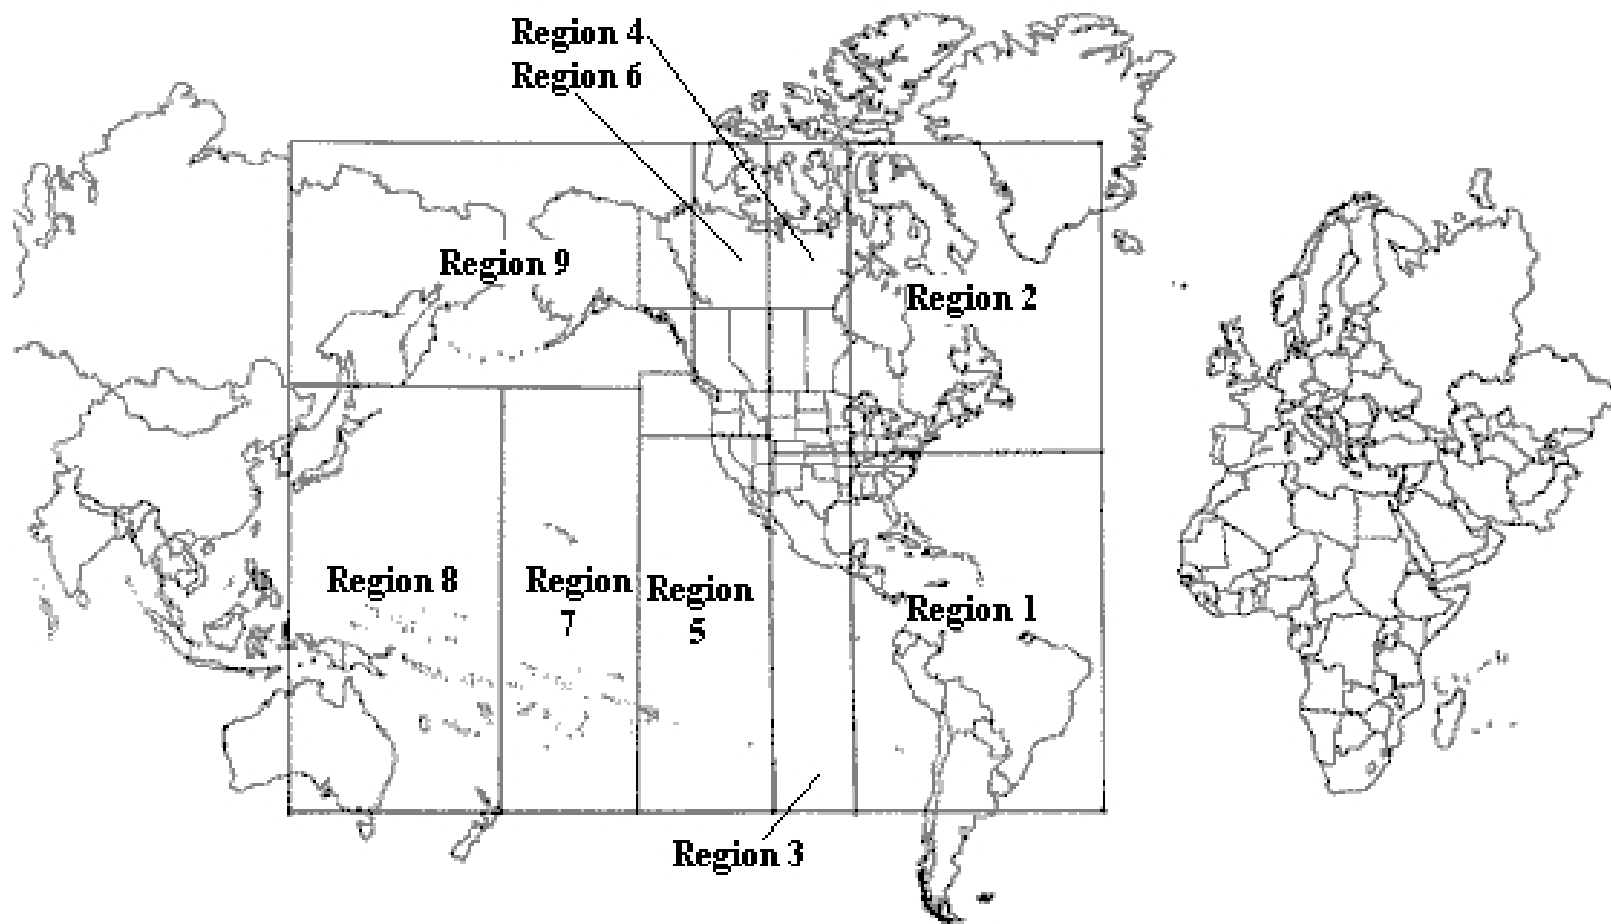

Dissemination of products generated in pipeline mode

Orbital to Granule Processing

Granule Size, Granule Naming convention, Missing Granules, Multiple Strings for operational and backlog processing, Granule Reprocessing, and Data Transmission Problems.

AWIPS Regions

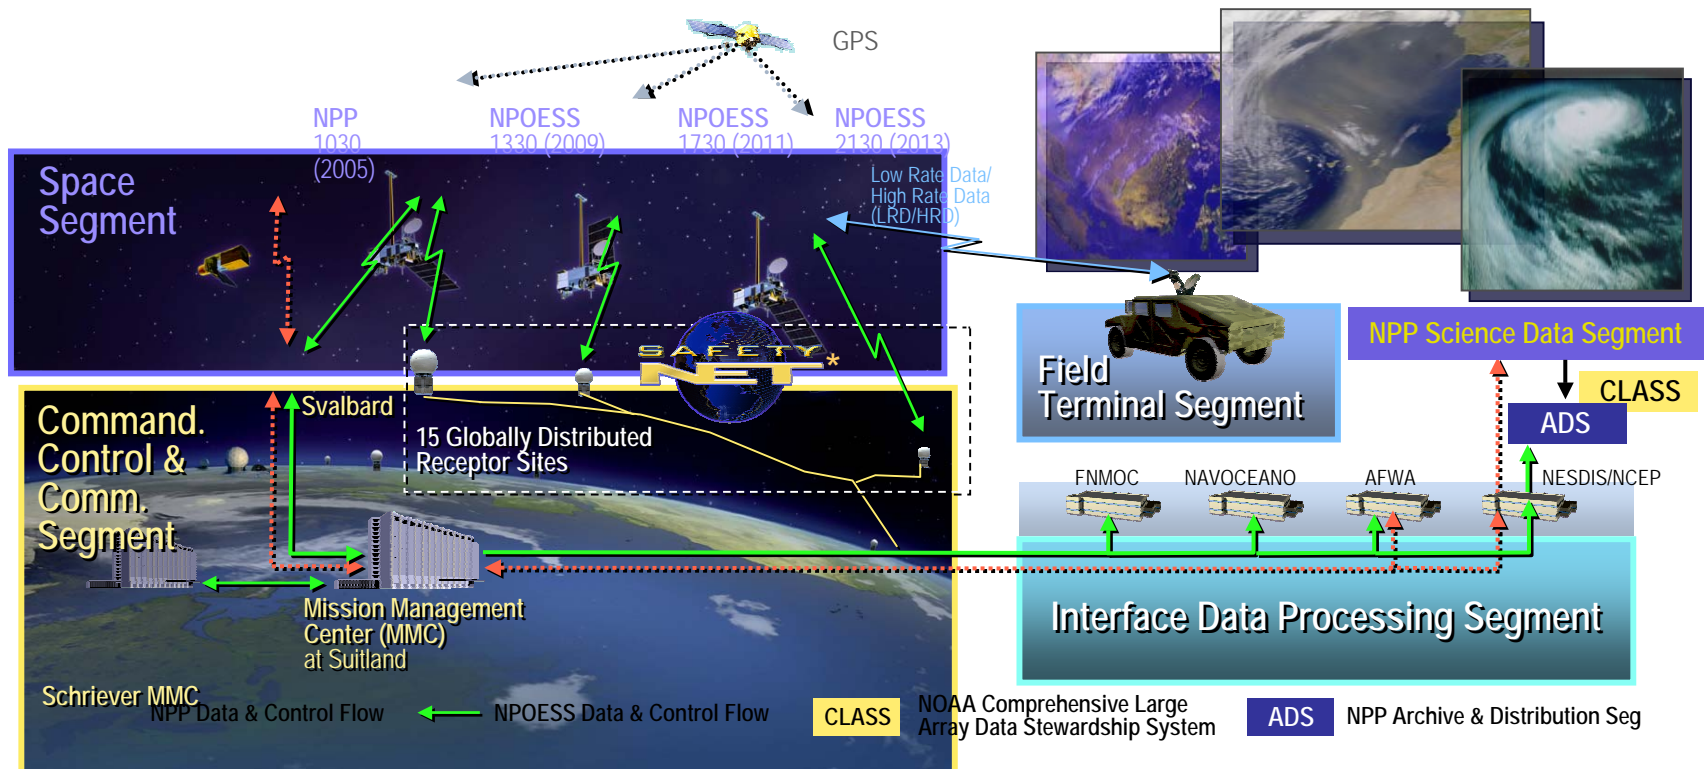

NPOESS Mission

- Provide a national, operational, polar-orbiting remote sensing capability

A Tri-agency Effort to Leverage and Combine Environmental Satellite Activities

* Patent Pending

OSDPD Product Access

On the Science Side

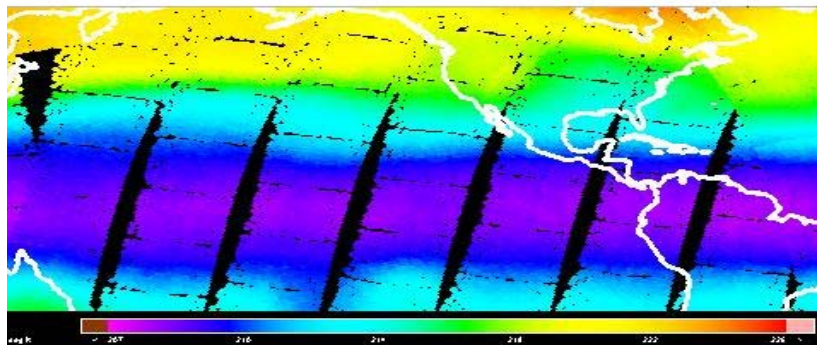

Environmental Data Graphic and Evaluation System (EDGE)

- **Three (3) Major Sub-systems:**
 - ***EDGEIS***: Horizontal Fields of Orbital Products
 - ***Profile Display (PDISP)***: Collocated Radiosonde and Satellite Observations
 - ***Vertical Statistics (VSTAT)***: Collocations
- AQUA/AIRS vs. ATOVS Comparisons (Walter Wolf, Chris Barnet, Tom King and Murty Divakarla)
- ***Provided to EUMETSAT (Eamonn McKernan support of Collaborations for METOP ...***

New ATOVS System-2005 Science

- *Incorporate AMSU-B*
- Regression Guess replaces Library Search
 - Calculate First Guess Radiance (OPTRAN)
- Measurement (Radiance) Bias Adjustment
 - AMSU-A
 - AMSU-B
 - HIRS
- Analytical Retrieval Solution (OPTRAN-CRTM) per sounding (Paul Van-delst, Tom Kleespies, Yong Han)
 - based on Guess Temp and Moisture
- Peripheral Upgrades
 - Limb-adjustment
 - MSPPS Products... MIRS
 - Expanded Validation w/NWP

NOAA/NESDIS Vertical Statistics Display

May 2, 2005 to May 8, 2005

60N to 60S, 180W to 180E

Sea Day/Night Clear/Cloudy

NOAA/NESDIS Vertical Statistics Display

May 2, 2005 to May 8, 2005

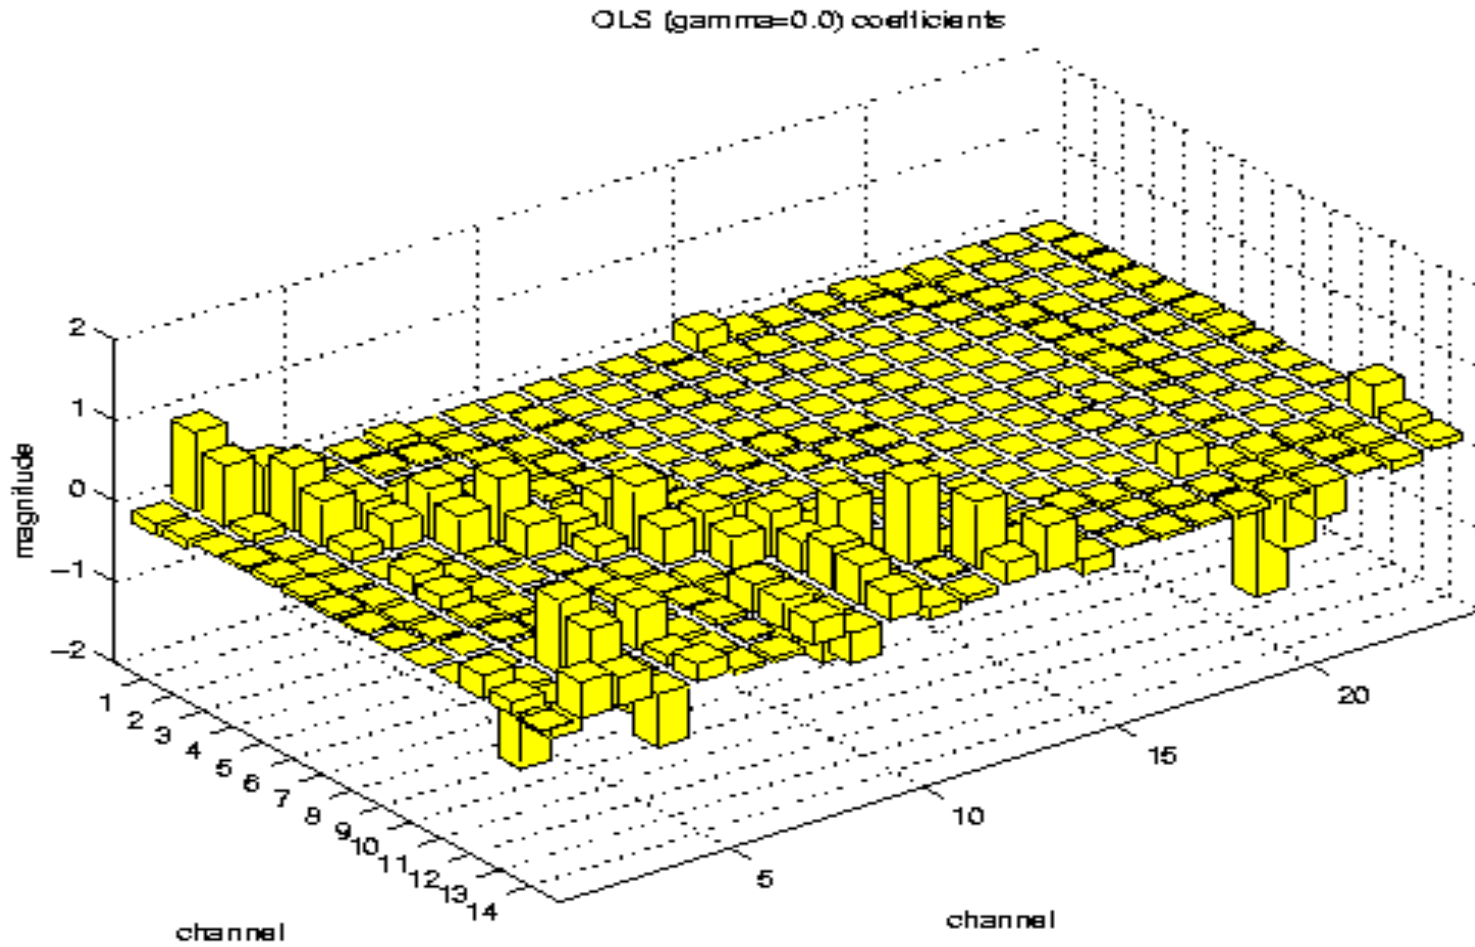

60N to 60S, 180W to 180E

Sea Day/Night Clear/Cloudy

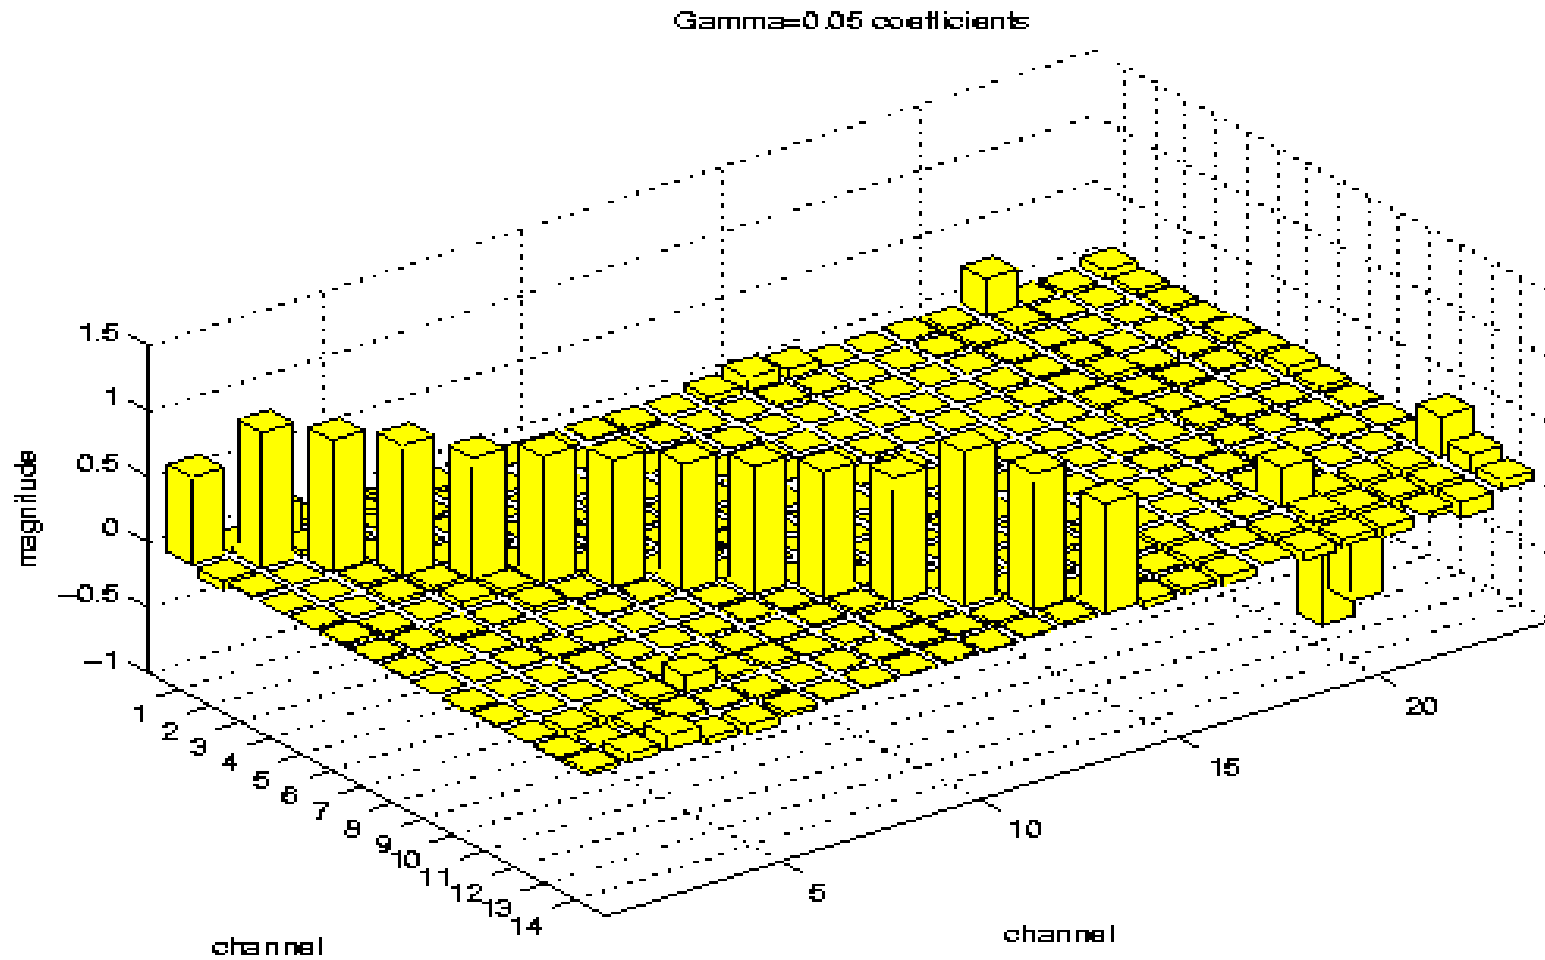

RT Bias Coefficients

(Gamma=0.0 ; AMSU-A ch 4-14; AMSU-B ch 3,4,and 5)

RT Bias Coefficients

(Gamma=0.05 ; AMSU-A ch 4-14; AMSU-B ch 3,4,and 5)

First Analytical Retrieval

$$(\mathbf{T} - \mathbf{T}_g)_j = \mathbf{S} \mathbf{A}^t (\mathbf{A} \mathbf{S} \mathbf{A}^t + \mathbf{N})^{-1} (\mathbf{R} - \mathbf{R}_g)_i$$

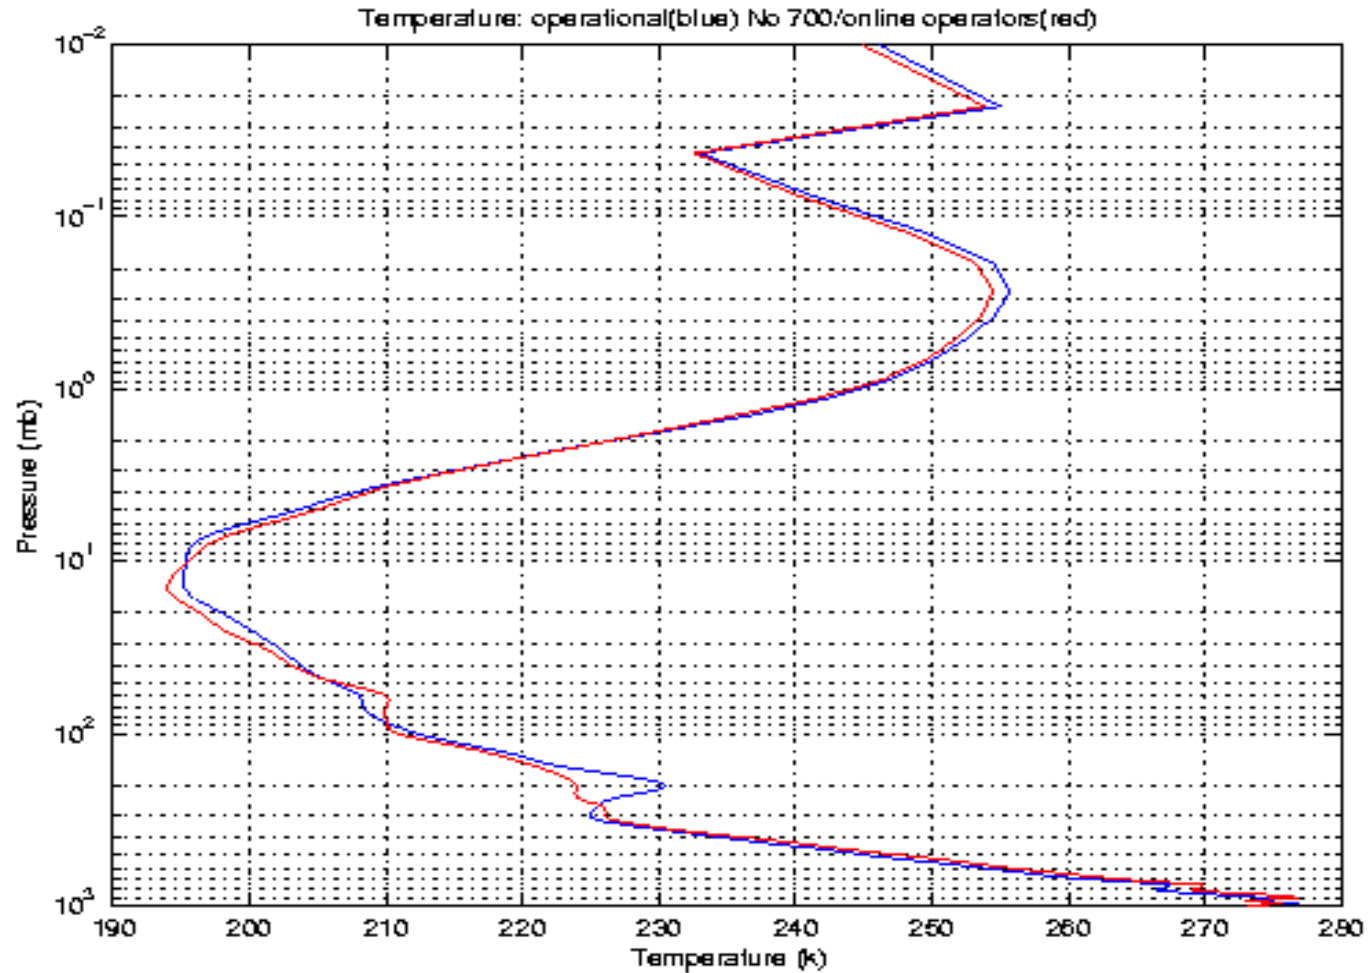

... *there are many questions and much potential for improvement **once the basic capability is installed and operating as designed:***

- MVS approach w/ CRTM - OPTRAN
- N matrix as scene dependent ...
- Pressure levels versus layers (40 TOVS levels ???)
 - Also affects radiosonde interpolation
- Surface T, P, TPW and other boundary conditions (emissivity ...)
- Others

- Retrieval on slant path
 - RT bias adjustment?
- Iteration
 - convergence testing?
 - S and N matrix adjustment?

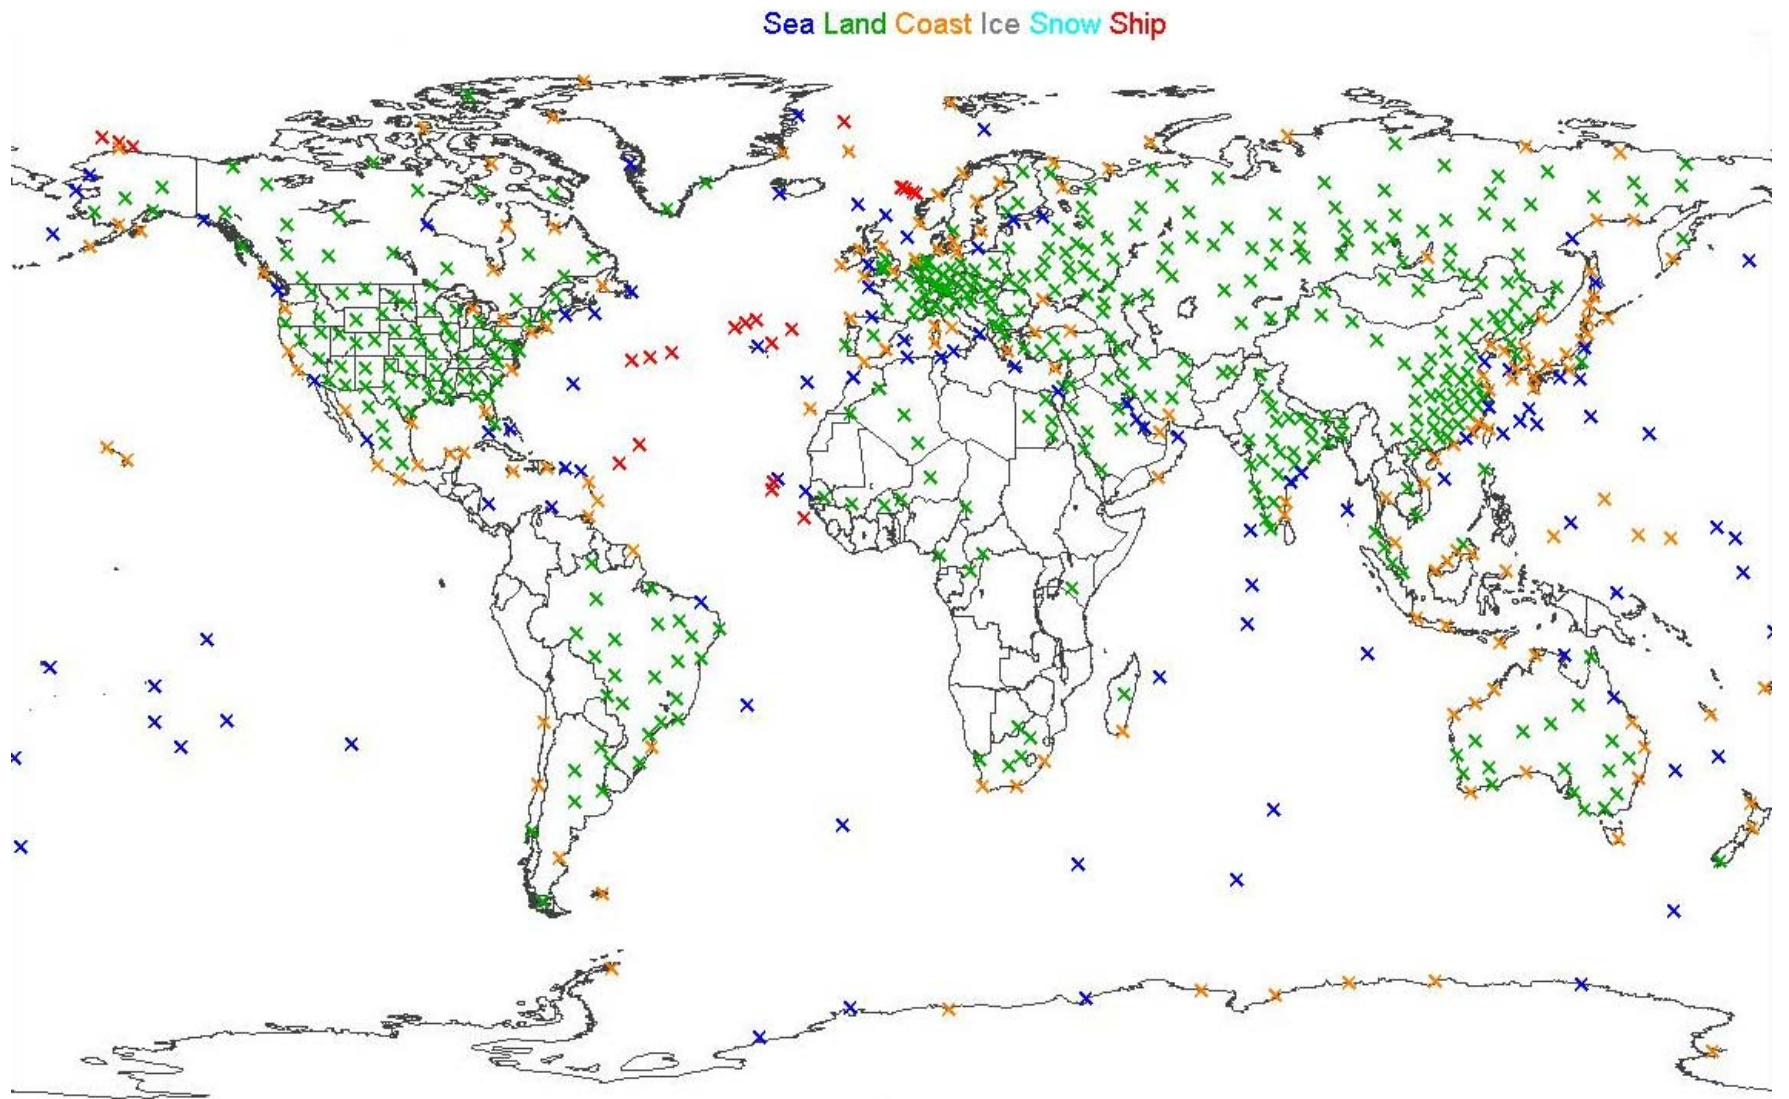

First Analytical Retrieval

(achieved in ATOVS operational environment)

NESDIS Unified/Expanded Validation

- Radiosonde Screening
- Radiance Comparisons
- Collocations with multiple satellite systems:
 - ATOVS Operation
 - Sys 2005 (NOAA-N)
 - AIRS (Goldberg, Barnet)
 - MSPPS (MIRS, F. Weng)
 - w/NWP
 - GOES

MDB ... for all Radiosonde types

Summary & Conclusions (AIRS Retrievals)

- **No Appreciable Difference in Day and Night Retrieval RMS**
- **No Appreciable difference in Time and Space Window Collocations - 3 HR vs 1 HR - An Improvement of 0.1K Temp Error, 4% difference at the Surface WV**
- **AIRS Biases Need to be addressed –**
 - Using MODIS with AIRS Cloud Clearing
 - CO2 Climatology will Help ?
- **Regression Using RAOB-AIRS Collocations shows Promise as a Fast Eigen Vector Regression Step.**

Support and interest for such work beckons
the question “ *Why Soundings?*”

ITSC to address:

Operational products provide a rich environment for learning

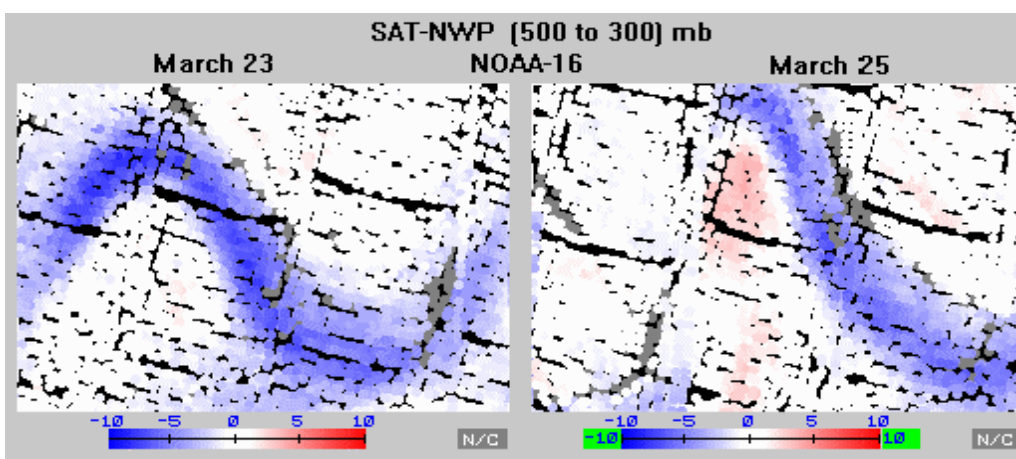

Importance of maintaining “*heritage*” Product systems,

Utility in weather/climate analyses/diagnostics,

Data compression,

Demonstration of sounder capability to depict weather

Global, regional and local (including direct readout) scales

< **DIFFERENCES**
between NESDIS
Satellite Soundings
and NWP

of the
JET STREAM
< (EMC 400mb Wind)

< (AMSU-A Ch 5)

extras

IJPS, IPS

Overview of Upgrades for Metop

- New Ingestor and Front End Processor (FEP)
 - Ingest of common instrument data, from the GDS as CCSDS VCDUs, in pipeline mode
 - Frame synchronizing and filtering of GDS data at Ingest
 - Receipt and distribution of ASCAT, GOME and GRAS Level 1b and IASI Level 1c products
 - Ingest blind orbit GAC, in pipeline mode
 - Produce instrument (NOAA) Level 1a's (i.e., for POES data - decommutate the TDM stream)

IJPS, IPS

Overview of Upgrades for Metop (Continue)

- New Preprocessor
 - IBM RS/6000 (development) and P570 (operations) AIX platform for parallel processing
 - Processing on a distributed (scalable processor) UNIX platform for parallel operations
 - Preprocessing of blind orbit GAC in pipeline mode
 - Producing common instrument Level 1b's from Metop in pipeline mode
 - Producing new Level 1b's for MHS and Full Resolution GAC (FRAC)

WHY SOUNDINGS

.... definitive statement ITSC

NOAA-N/N' Changes Continue

- MHS/MIU
 - MHS and AMSU-B Differences
 - Channels Frequency are Similar
 - Channels with different frequency
 - » H2 and 17 (change from 150 to 157)
 - » H5 and 20 (183 +/- 7 to 190 GHz)
 - Number of warm target PRTs
 - MHS has 5
 - AMSU-B has 7
 - Different Algorithms for Calibration
 - 1b/1b* format similar with minor changes

NOAA-N/N' Changes Continue

- MHS/MIU
 - Understanding different modes
 - Nominal modes
 - Non-nominal modes
 - MIU nominal modes
 - MIU non-nominal modes
 - Accommodating different modes
 - Set flag for Nominal and Non-Nominal modes
 - Operational nominal modes 99% of time

NOAA-N/N' Changes Continue

- HIRS

- Field of View Size Change for HIRS
 - HIRS/4 10KM FOV compared to HIRS/3 20KM FOV
 - Users may need to change software, especially where co-location with other sensors such as AVHRR
- Patch Temperature changed from 100 to 95K
- Added a 5th Internal Warm Target temperature sensor and third telescope temperature sensor
- Added extra bit to the electronic serial number in the Digital A data stream Element 63 Bits 40-44
 - Software change
 - Bits will be redefined in 1b

NOAA-N/N' Changes Continue

- HIRS Issues (Cont.)
 - Software Correction for the Operational HIRS Lunar Intrusion
 - HIRS Calibration Algorithm Version 4.0
 - New algorithm to be introduced as a supplement or replacement to current operational HIRS calibration algorithm

NOAA-N/N' Changes Continue

- AMSU-A
 - Correction of Lunar contamination
 - Will require minor change to 1b format
 - Header and Data record
 - Correction for sudden jumps in the calibration counts (NOAA-17 Channel 3 anomaly)
 - Minor changes to 1b format
 - Header and Data record

NOAA-N/N' Changes Continue

- AVHRR
 - Change to AVHRR Scaling Factors for some of the AVHRR nonlinear radiance coefficients
 - IR Operational/Test Cal Channel 4 coefficient 3
 - IR Operational/Test Cal channel 5 Coefficient 3

NOAA-N/N' Changes Continue

- Other 1b/1b* Format changes
 - Additional Headers added
 - Ancillary Data Set Names added
 - Quality Information added
 - Could be used to determine which data to keep

NOAA-N/N' Changes Continue

- New Telemetry File
 - File will contain telemetry that is not contained in instrument 1b
 - Will be useful for MIU data when in Non-nominal modes
 - All telemetry data will now be archived
 - May be similar to AIP 1a file
 - May also contain science data

Update Product Applications for Pipeline Processing

- **Atmospheric Soundings, Real-time Ozone, Hazards, Microwave Surface and Precipitation, CLAVR Cloud Flags**
- **Applications that plan to use 1-km AVHRR data from Metop are CLAVR cloud flags, Aerosol, Imagery, CoastWatch, Radiation Budget, Sea Surface Temperature, Vegetation, Hazards, Snow/Ice & Significant Event Imagery**
- **Pipeline concept: End to end test with preprocessor (initial test Sept/Oct 2004)**

Soundings System Upcoming Changes and Activities

AWIPS

- U.S. only system (current distribution)
- NOAA-16 ----NOAA-18 will be added
- Nine regions (shown on the next slide)
- Retrievals parsed by region
- Used by U.S. Forecast Offices on AWIPS-dedicated machines

ATOVS Porting

Porting ATOVS from Cray to IBM SP

- Old Cray (J90)

- New IBM SP P655 (4 nodes)

 - 2 nodes (called East and West) for parallel, pre-production testing

 - 2 nodes (called North and South) for production

 - ATOVS from all 3 polar orbiters (N15, 16, and 17)

 - Reduces orbital processing time by 17 minutes (From 20 minutes to 3 minutes)
