

IASI Level 2 version 6

Thomas August,
T. Hultberg, M. Crapeau,
X. Calbet

- ✓ PPFv5 operational since 14/09/2010
- ✓ Significant improvements: Atmosph. Temperature (precision < 1K)
 - Land Surface Temperature
 - Cloud products
 - O₃ and CO total columns
- ✓ Introduced some cloudy retrievals following user request

Areas of development:

- Improve & characterise further T and WV in the bottom layers
- Include full retrieval error characterisation (→ averaging kernels)
- Improve cloudy/overcast retrievals
- Increase the yield
- Evolve further the atmospheric composition products
- Simplify the processing flag collection, especially for cloud flags

Disseminated in near-real time

TWT

Temperature (vertical profiles)

+ Averaging
Kernels

Humidity (vertical profiles)

Surface Temperature (Land & Sea)

EMS

Surface emissivity

CLD

Cloud detection, cloud fraction & top height

OZO

O₃ profiles + Averaging Kernels

TRG

CO, N₂O, CH₄, CO₂ Total columns

CO profiles + AK, (SO₂, HNO₃)

v6

Outline

- 1. The IASI L2 processor v6**
- 2. Initial assessment results**
- 3. Deployment plan**

- **Collocation of auxiliary microwave measurements: AMSU & MHS L1B**
- Collocation of ECMWF forecasts (for cloud test)
- Collocated AVHRR radiance analyses and integrated cloud fraction
- Land/Sea mask (AAPP atlas)
- Land surface emissivity atlas (Borbas et al.)
- Digital Elevation Model (GTOPO30)
- **Principal Components Analyses → reconstructed radiances**

Joint MW+IR retrievals

1. The IASI L2 processor v6

PWLR: MW+IR retrievals

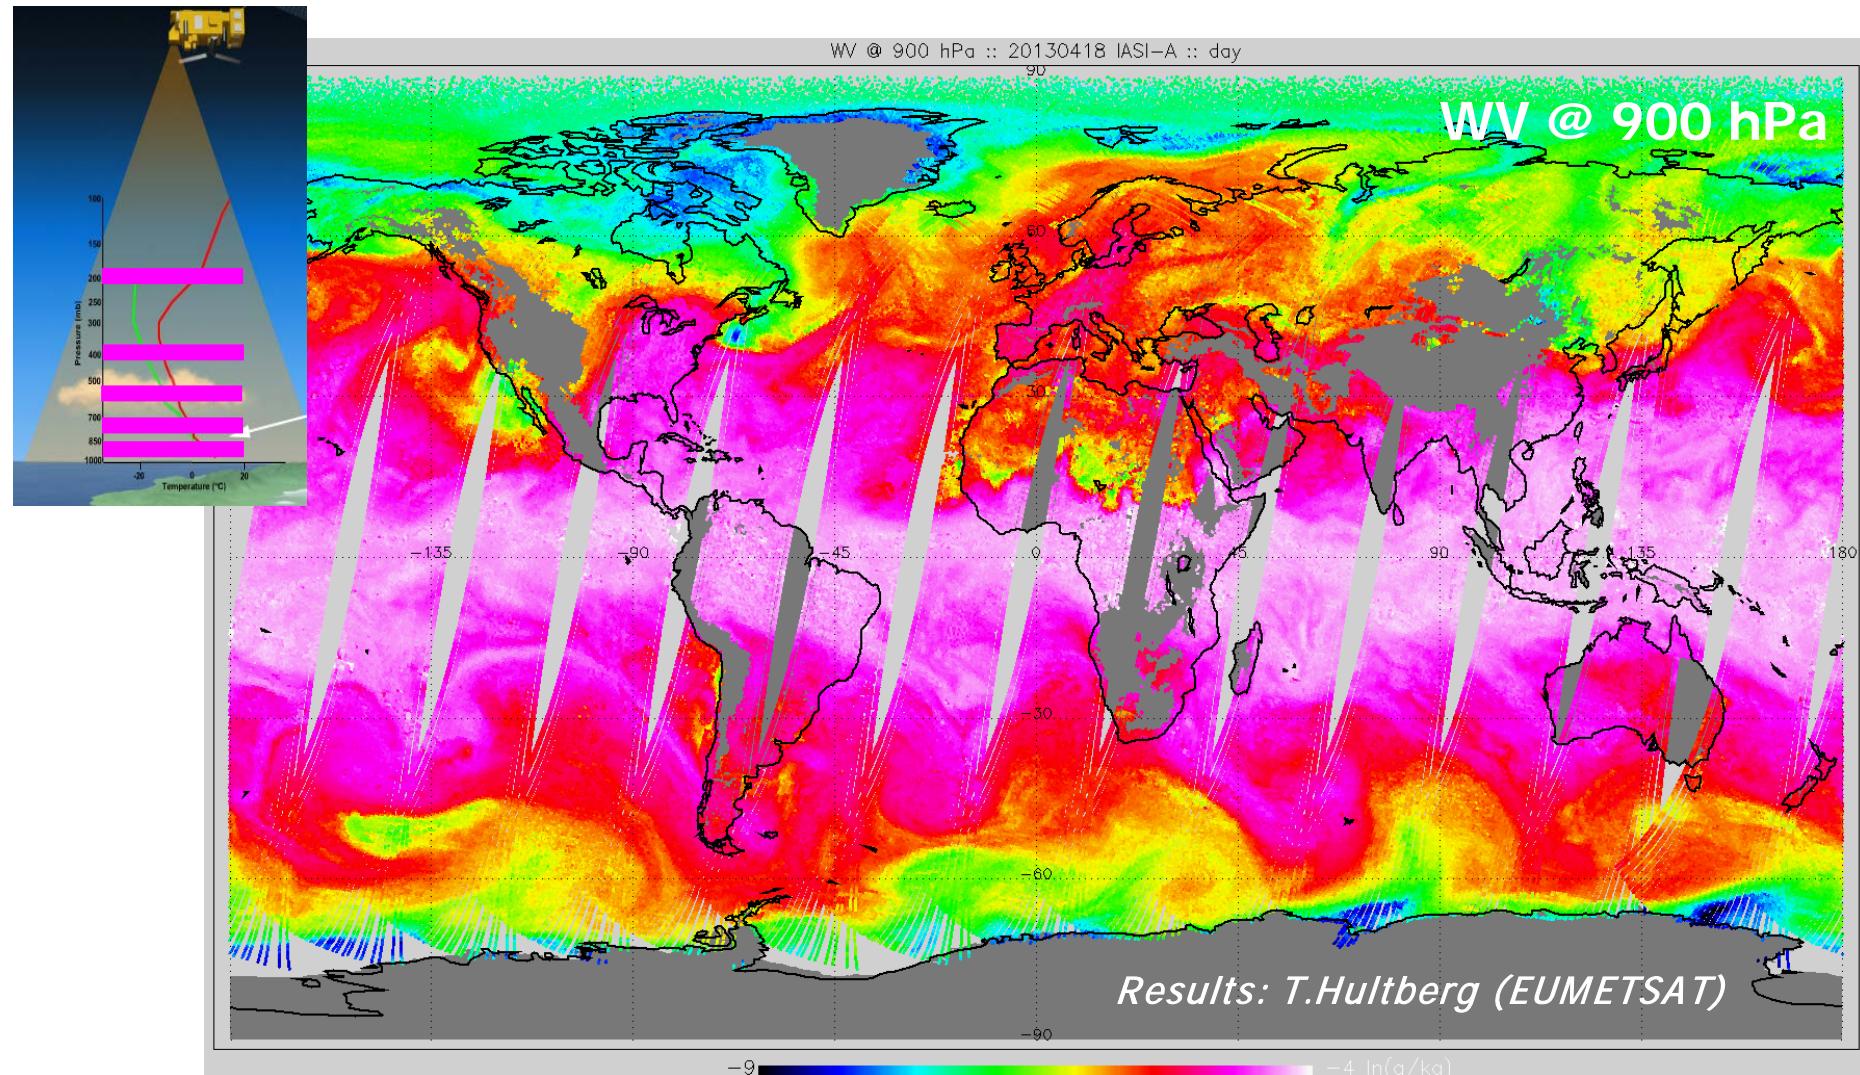

Principle: Joint **MW+IR** piece-wise linear regression (**PWLR**) retrieval with different coefficients for different classes of observations to account for non-linearity between the observations and the atmospheric state vector.

- Predictors: **AMSU**, **MHS** and **IASI** measurements, satellite zenith angle, surface elevation
- Outputs: Ts, **profiles of T, WV & O₃**, Ps + **Quality indicator**
- Training set: **Real observations** & co-located ECMWF analyses.
- **32 regression classes** based on MHS, AMSU and IASI radiances for sea, ice, low land and high land. No *ad hoc* latitude striping. This ensures good geographical continuity in the retrievals.

-
- ✓ ~**All-sky retrievals**, completed with OEM(IASI) in clear IFOVs
 - ✓ The retrievals come at the **IASI single footprint resolution**

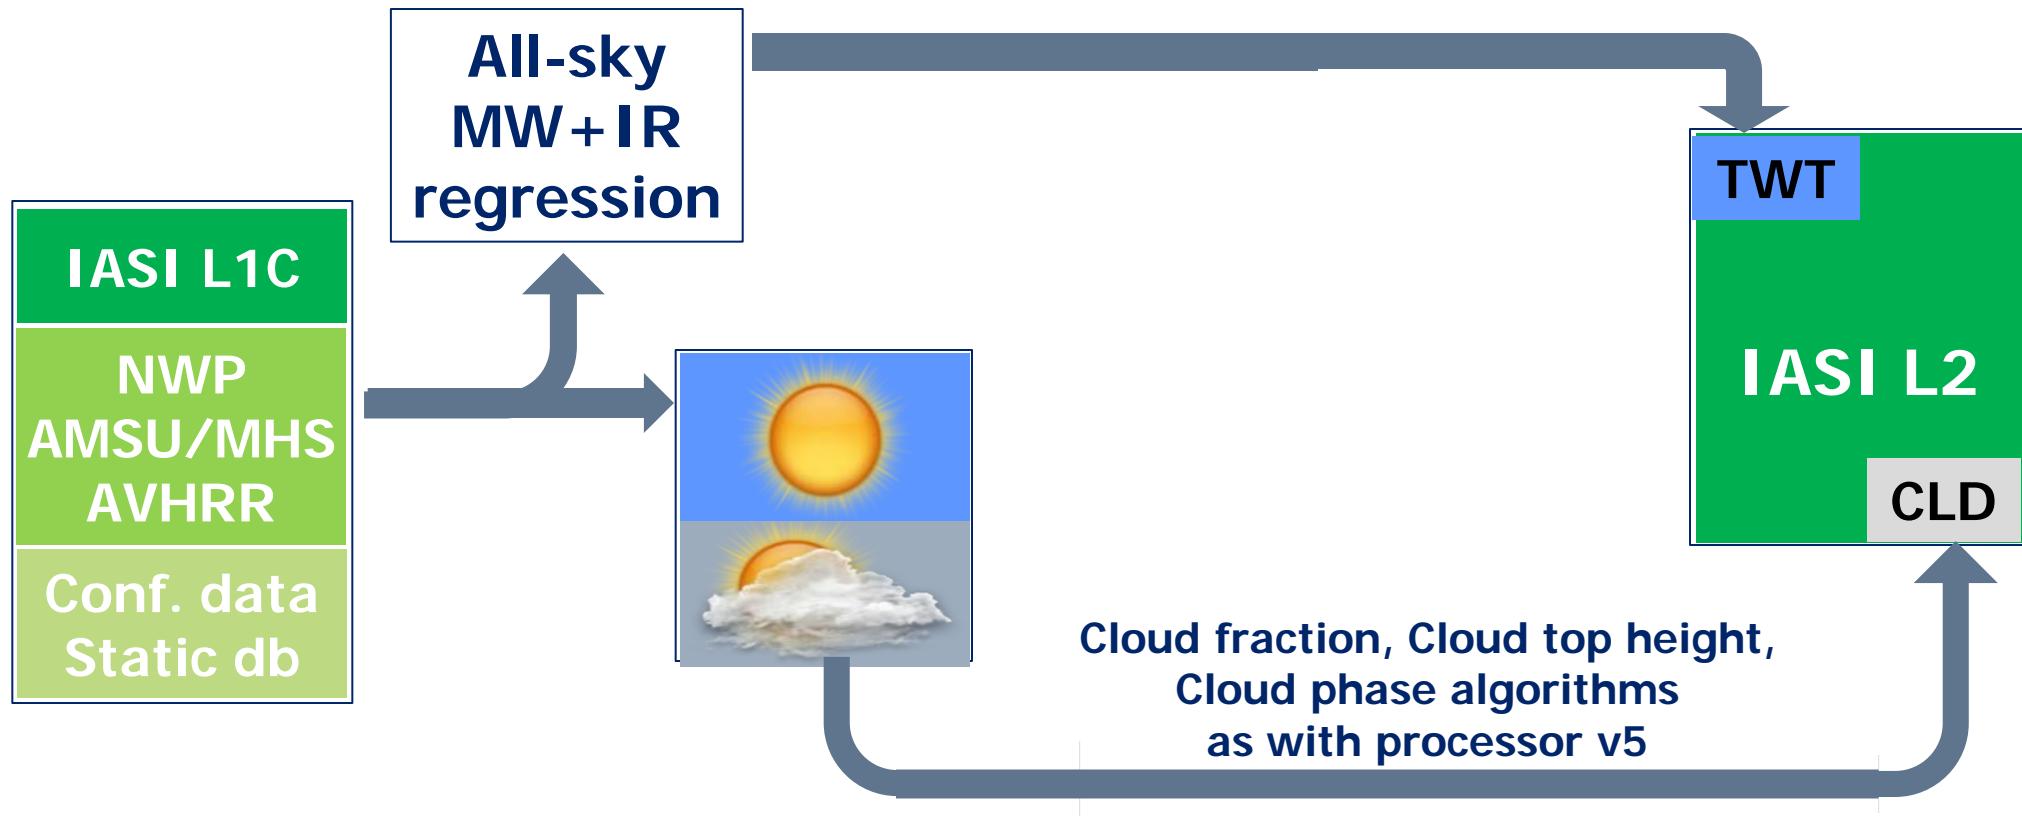

1. The IASI L2 processor v6

Joint MW+IR retrievals

1. The IASI L2 processor v6

The cloud product

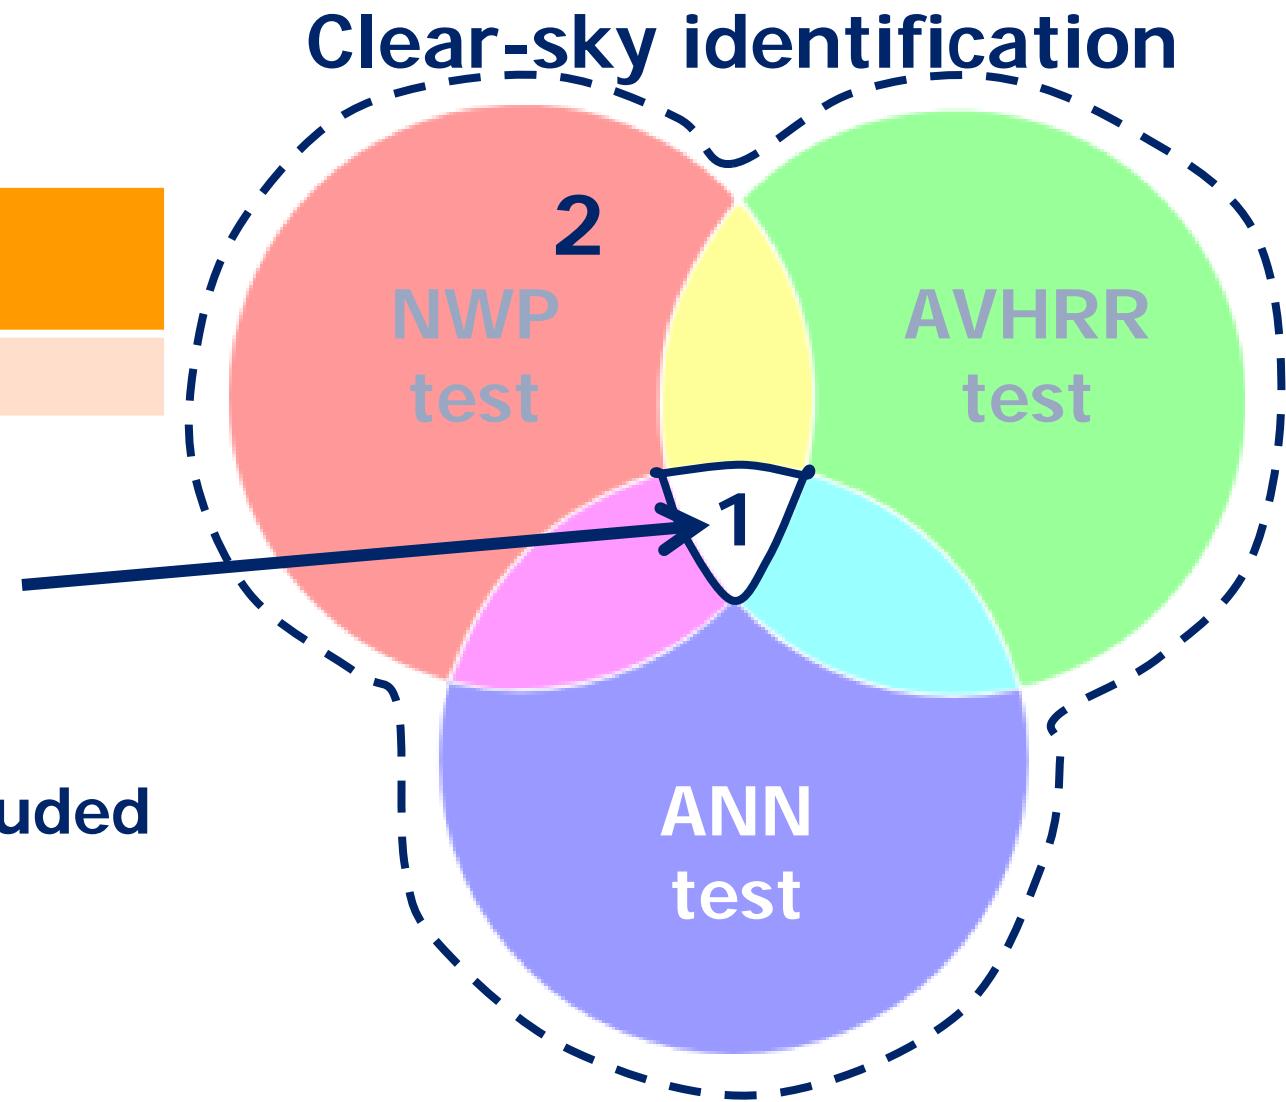

+ High confidence

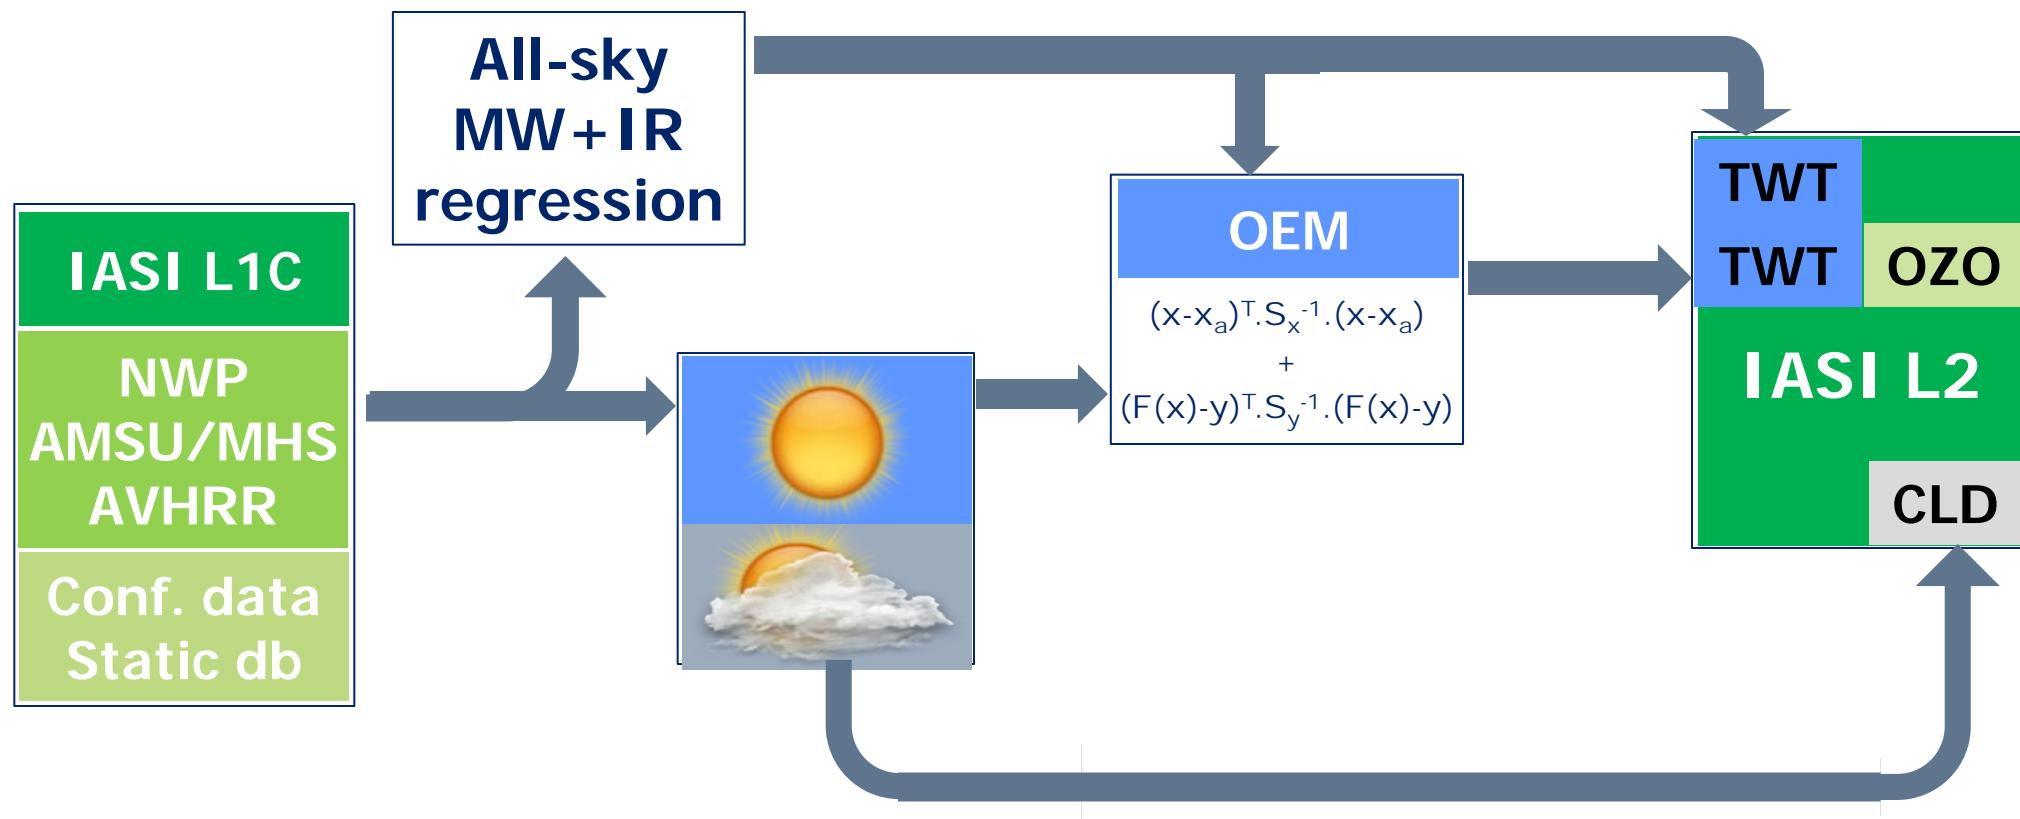

- Low yield

! Some areas are systematically excluded

1. The IASI L2 processor v6

New OEM configuration

1. The IASI L2 processor v6

New OEM configuration

- So far **clear-sky** and using **IASI measurements** only ($\text{FLG_CLDNES} = 1,2$)
- Retrieved parameters: **T, WV and O₃ profiles, Ts**
- Atmospheric profiles represented in PCs (as in v5)
- Identified **common directions** in the cost minimisation and forward model **subspaces**. Computing and eigenvectors (*3rd IASI workshop on PC for atmospheric profile retrieval*, Vienna 2013; NWP-SAF)
- **New channel selection** for IASI L2 products in band 1 and 2 (*ITSC-18* 2012)
- **Variable radiances** allowing the scan angle as predictor
- **Variable a priori** from the atmospheric climatology mapped by the MW (AMSU/MHS) and IR (IASI) data
- Much **faster 1D-Var**, 1 or 2 pure Newton iterations only
- **Full retrieval error covariance matrix** and *a priori* stored (compressed) in the products; allowing the post-computation of the **averaging kernels**.

1. The IASI L2 processor v6 Atmospheric Composition

O3M-SAF CDOP-2 (2012-2017)

Implementation in the EPS ground segment of a series of atmospheric composition products developped by ULB/LATMOS.

Algorithm: **FORLI** (Fast Optimal Retrievals on Layers for IASI, *Hurtmans et al., JQSRT 2012*)

➤ CO profiles + AK (2014)

Integration completed and verified

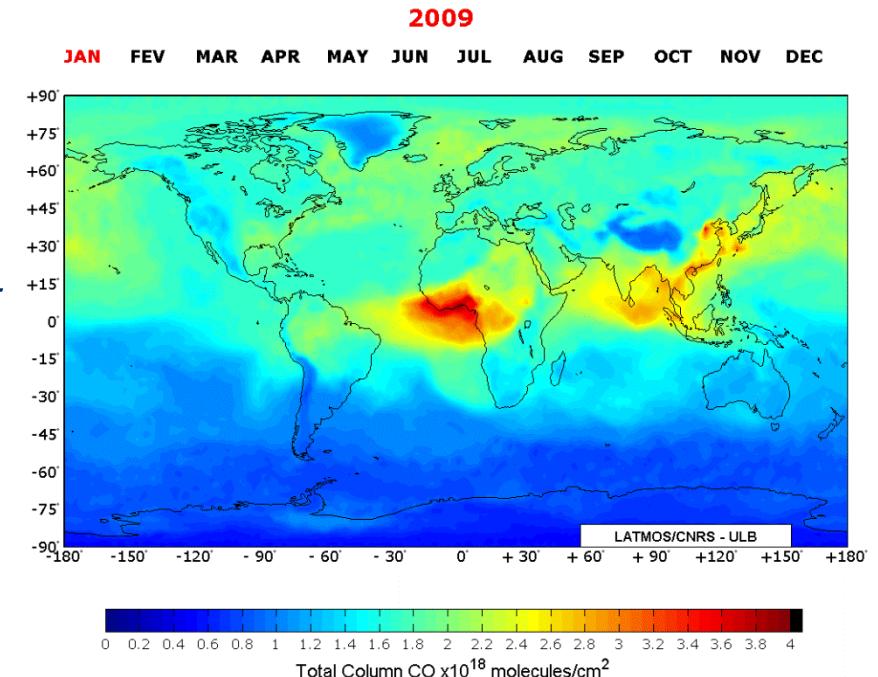

➤ SO₂ columns (2015)

➤ O₃ profiles + AK (2016)

➤ HNO₃ profiles (2017)

Place-holders for SO₂, O₃ and HNO₃ have been prepared in the IASI L2 products.

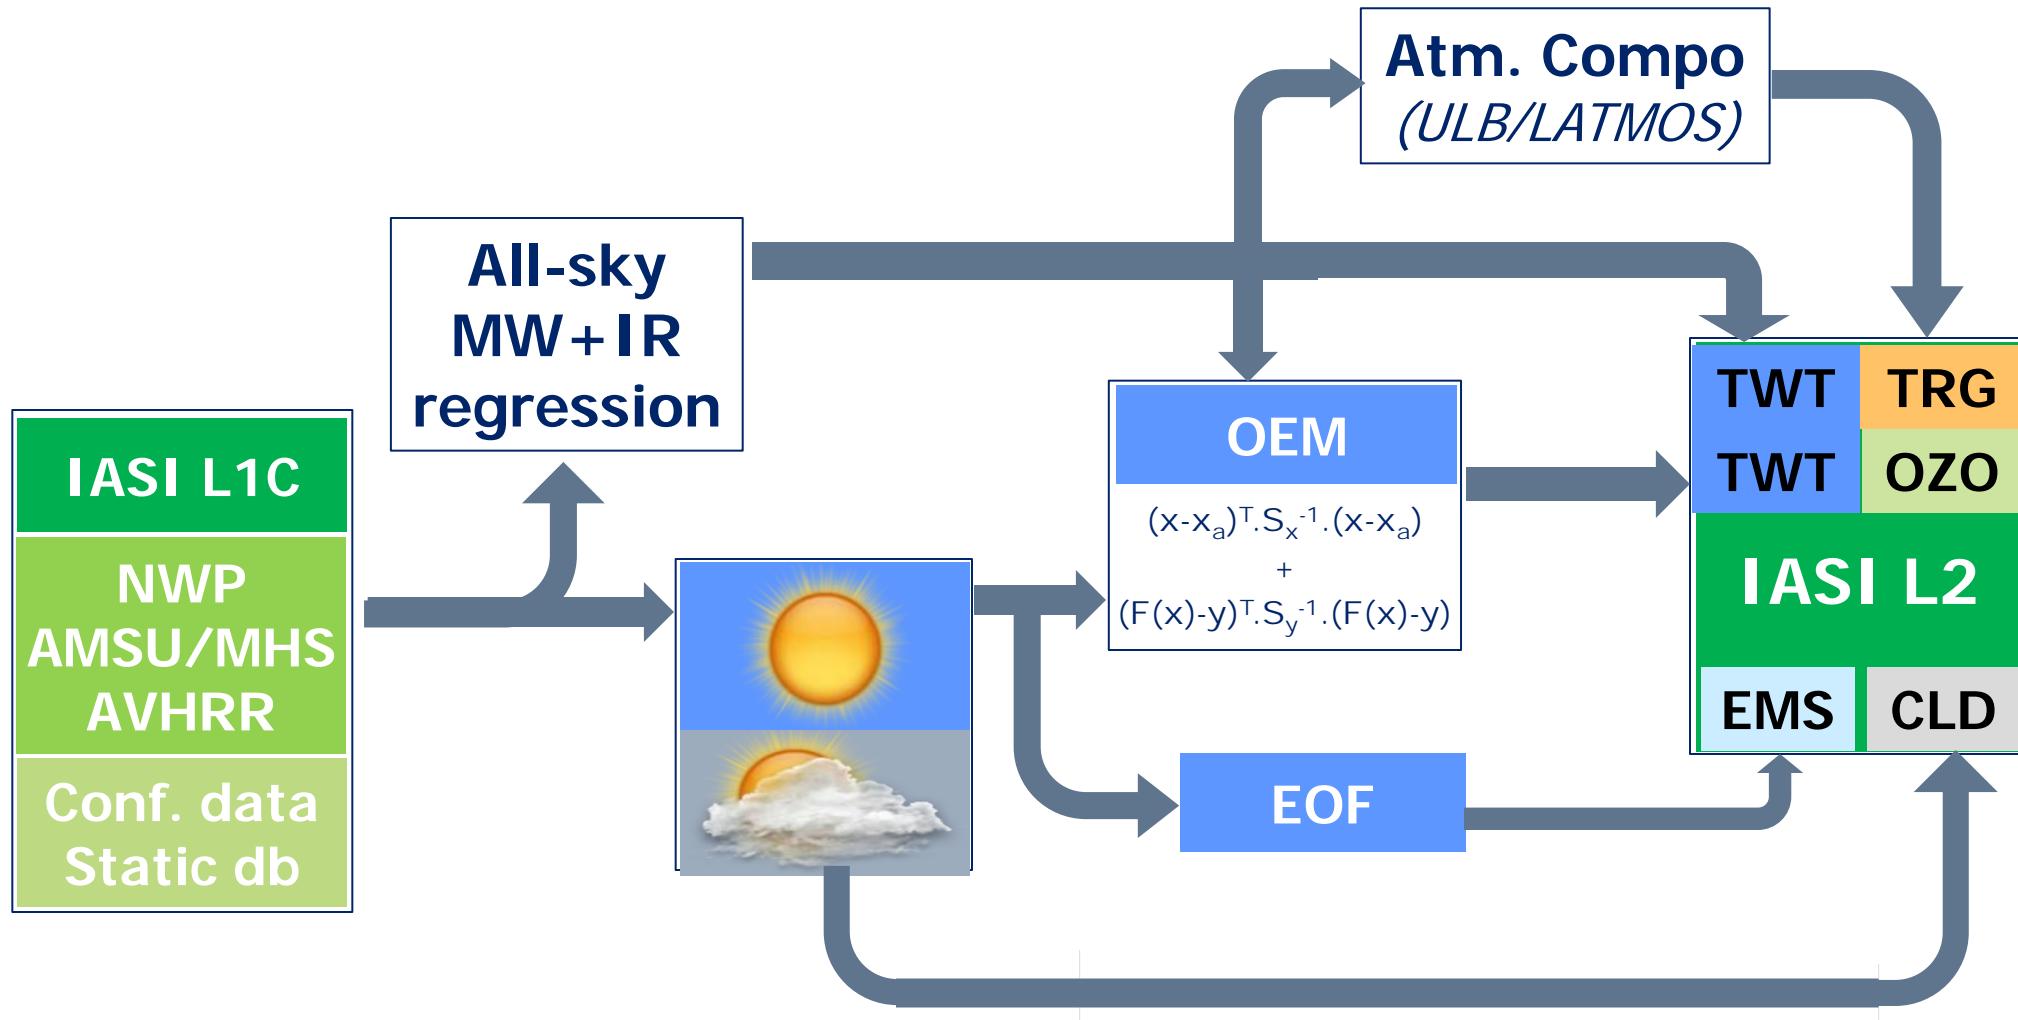

Exchanges started about algorithm description for SO₂.

3. IASI L2 v6 deployment

High-level schedule

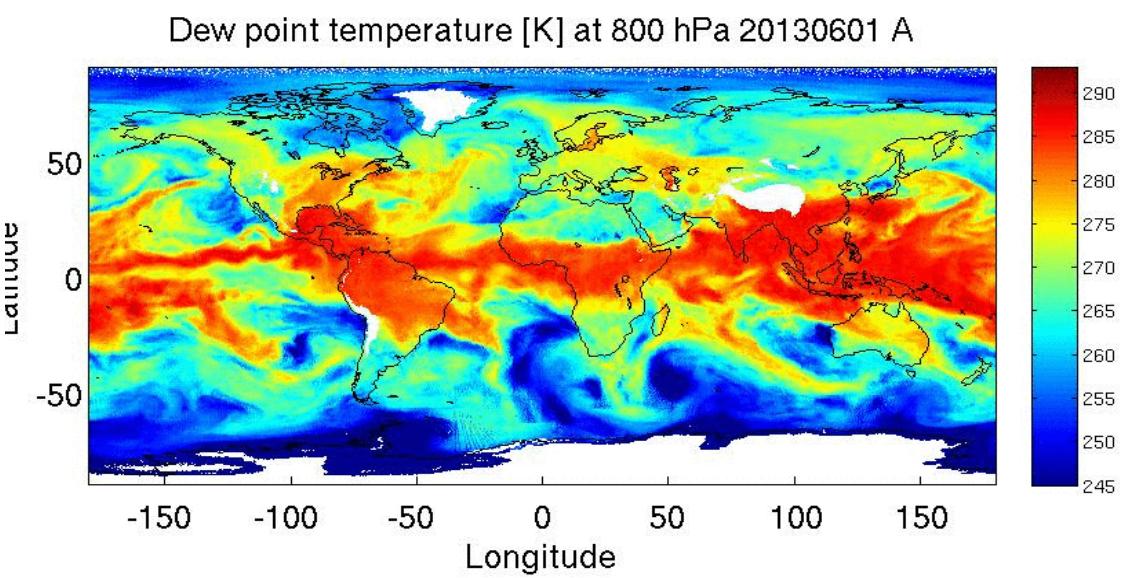

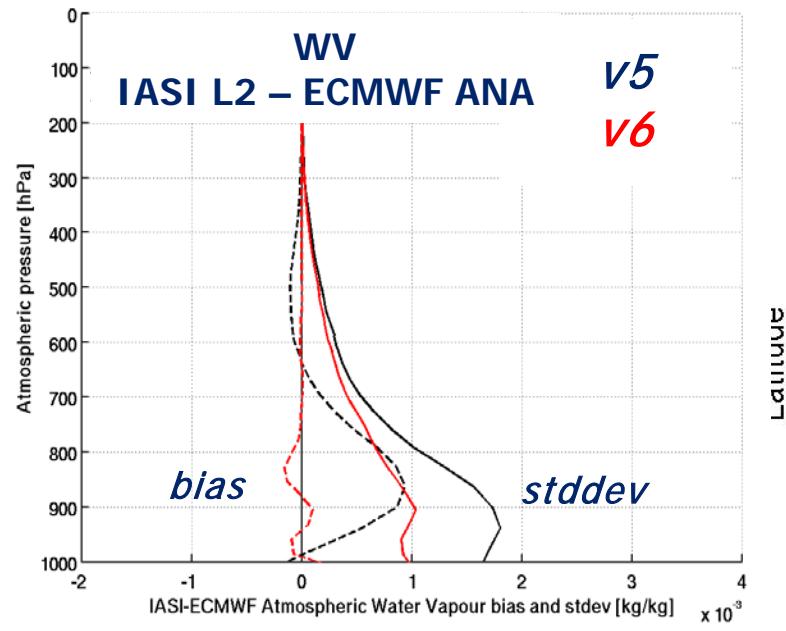

Provisional dates, pending completion of BUFR encoding and preparatory activities for archiving and dissemination

Summary

- ✓ **Simplified processing flags**, especially cloud information
- ✓ **Synergy MW+IR** allow **nearly all-sky T,q** statistical retrievals: ~95% yield
- ✓ **T & q profiles** significantly **improved**, especially in the **low troposphere** in clear and cloudy pixels (precision of $T < 1K$, $H_2O < 1.2 \text{ g/kg}$)
- ✓ Atmospheric profiles **yield doubled** with OEM (~20%)
- ✓ **Full retrieval error** estimate provided, from which the **averaging kernels** can be derived.
- ✓ New atmospheric composition products

Soon coming ... IASI L2 v6

BUFR products structure

V5	Content
TWT	Temperature, humidity profiles (90 levels) and surface temperature
CLP	Cloud detection and characterisation (phase, height, coverage)
EMS	Land surface emissivity (12 channels)
OZO	Ozone partial columns (0-6km, 0-12km, 0-16km) and total column
TRG	CO, CH ₄ , CO ₂ , N ₂ O Total columns

The EPS native format changes with v6 (format version 11.0). Test products can be already available.

The format and content changes in the BUFR products also affect the existing packets. Test data will be made available.

V6	Content
TWT	Temperature, humidity profiles (101 levels) and surface temperature
TWT_ERR	T _r H ₂ O Retrieval error covariance matrix (can be large)
CLP	Cloud detection and characterisation (phase, height, coverage)
EMS	Land surface emissivity (12 channels)
OZO	Ozone profiles (101 levels) and retrieval error covariance matrix
TRG	CO, CH ₄ , CO ₂ , N ₂ O Total columns
CO	CO total column, profiles and averaging kernels
HNO ₃	HNO ₃ total column, profiles and averaging kernels
SO2	SO ₂ amount and plume height estimates

For early information, implementation in 2015 and onwards. Place holders ready in EPS native format

Future work

- Complete the deployment and qualification of the v6
- Include the micro-wave in the optimal estimation
- Study the retrieval of clouds and land surface emissivity in the OEM
- Include SO₂ and HNO₃, evolve O₃
- Implement state-of-the art CH₄ retrievals to serve MACC
- Prototype a dust flag for SST quality flagging
