1DVAR Preprocessor

Multi-Instrument Inversion and Data Assimilation Preprocessing System (MIIDAPS)

Motivation: Increase the number and types of satellite radiometric observations assimilated in NWP

****CrIS****

S-NPP ATMS

Megha-Tropiques
SAPHIR

****IASI****

MetOp AMSU/MHS

NOAA-18 AMSU/MHS
NOAA-19 AMSU/MHS

- Consistent control
- Characterization of surface state
- Characterization of atmospheric state
- Linearization of state vector elements / background adjustment

MIIDAPS

Inversion Process

- Inversion algorithm consistent across all sensors
- All parameters included in state vector
- Uses CRTM for forward and Jacobian operators
- Valid over all surfaces/all-sky conditions
- Use forecast, fast regression or climatology as first guess/background

TRMM TMI

GPM GMI

GCOM-W1 AMSR2

****MIIDAPS extended to the hyperspectral Infrared for IR only or IR+MW 1DVAR analysis**

MIIDAPS IR Expansion

Extended state vector with hyperspectral IR covers trace gases / surface emissivity

1DVAR Analysis Fields and Derived Parameters

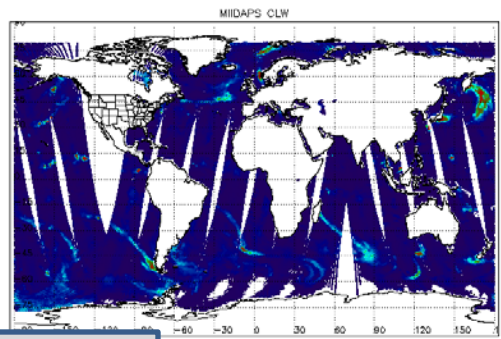

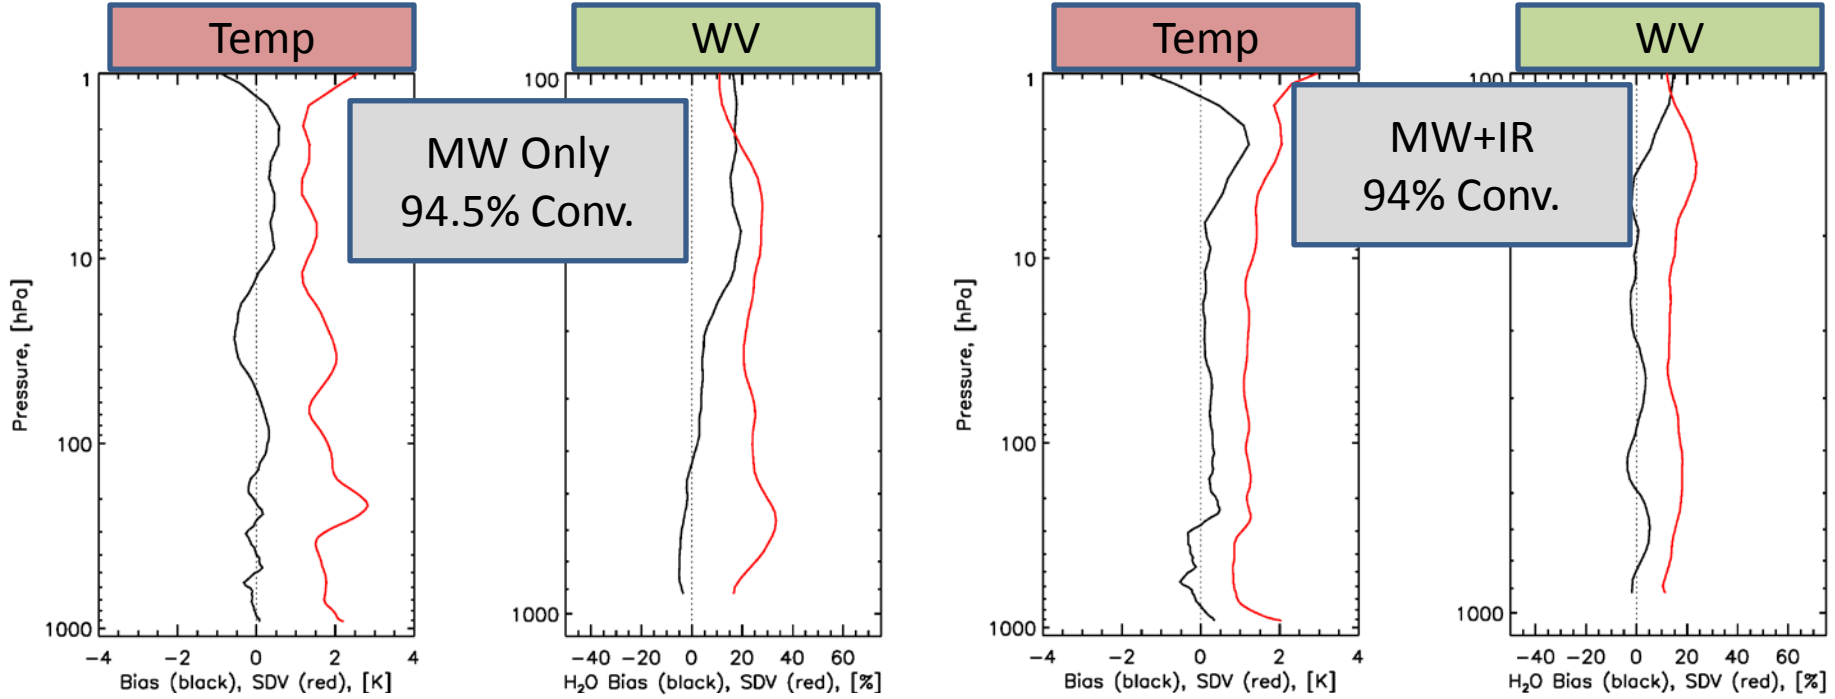

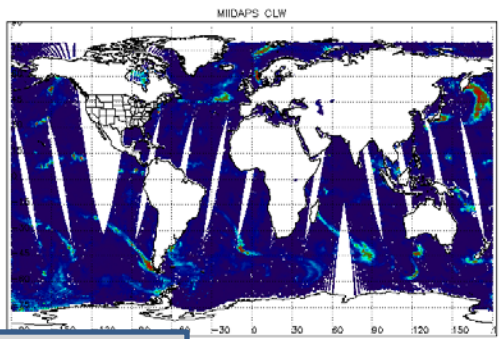

MIIDAPS IR Expansion

- MIIDAPS atmospheric state vector extended to trace gas profiles
- MIIDAPS emissivity state vector expanded to IR channels (AIRS, CrIS, IASI)
- ATMS/CrIS brightness temperatures simulated using ECMWF analysis (T, Q, CLW), trace gas climatologies, and various IR/MW emissivity models
- MIIDAPS applied to simulated data to retrieve state vector elements for MW only, IR only and combined IR+MW

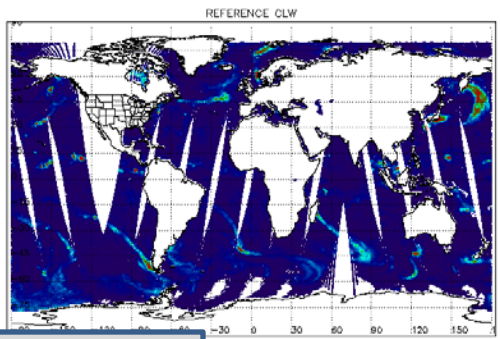

MIIDAPS MW+IR Compared to ECMWF

MW Only

IR+MW

ECMWF

MIIDAPS Technical Status

MIIDAPS package is freely available!

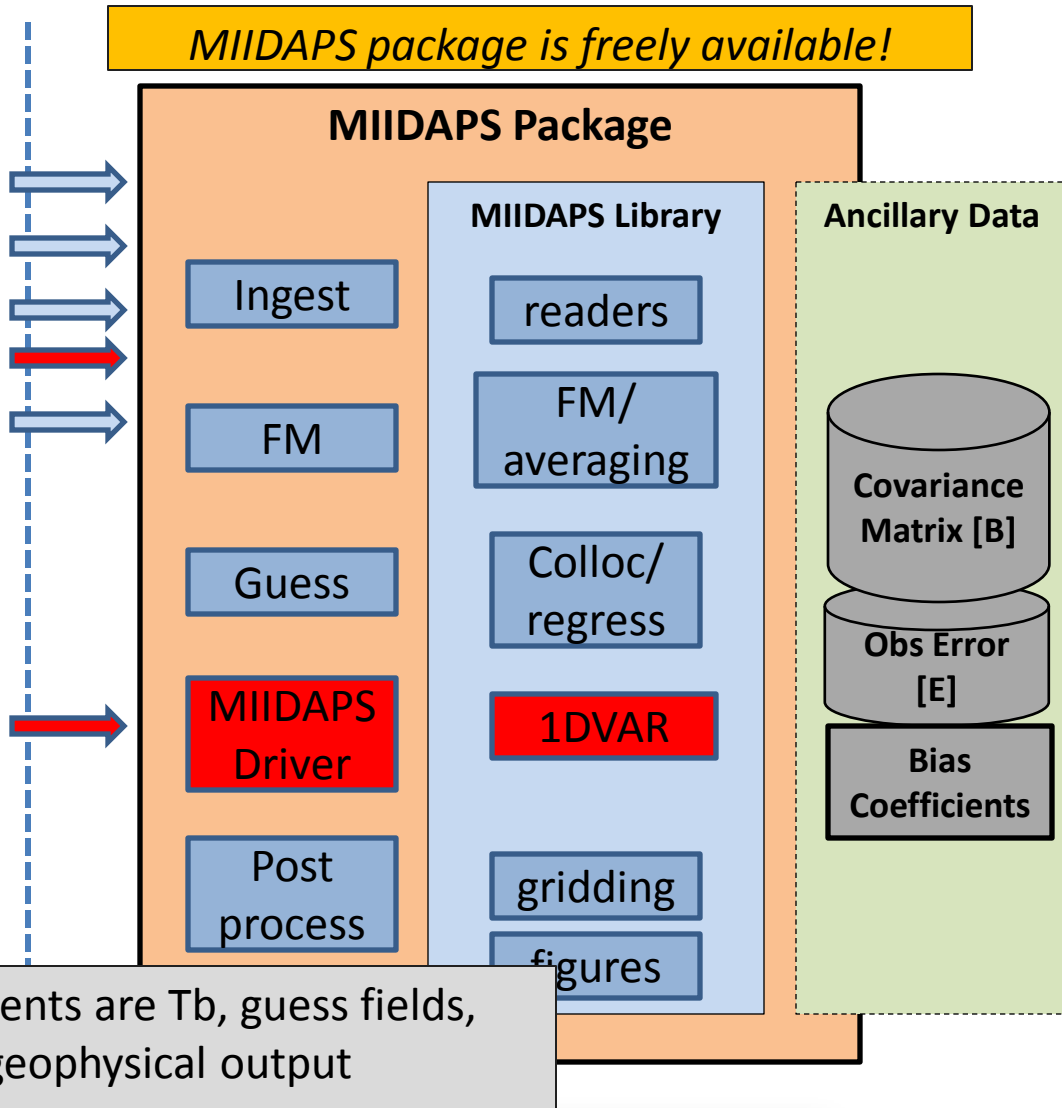

Use the same MIIDAPS interface

MIIDAPS Standalone Mode

- Data preprocessing
- Optional NWP collocation/guess
- CRTM Initialization
- Call MIIDAPS**
- Post processing

DA Interface (GSI)

- CRTM initialization
- Collocate guess to obs
- Call MIIDAPS**
- Call CRTM for background calc
- Call quality control subroutines
- Bias correction
- Gross error check
- Diagnostic file output

Quick overview of MIIDAPS 1DVAR

Future work

Experiment Setup

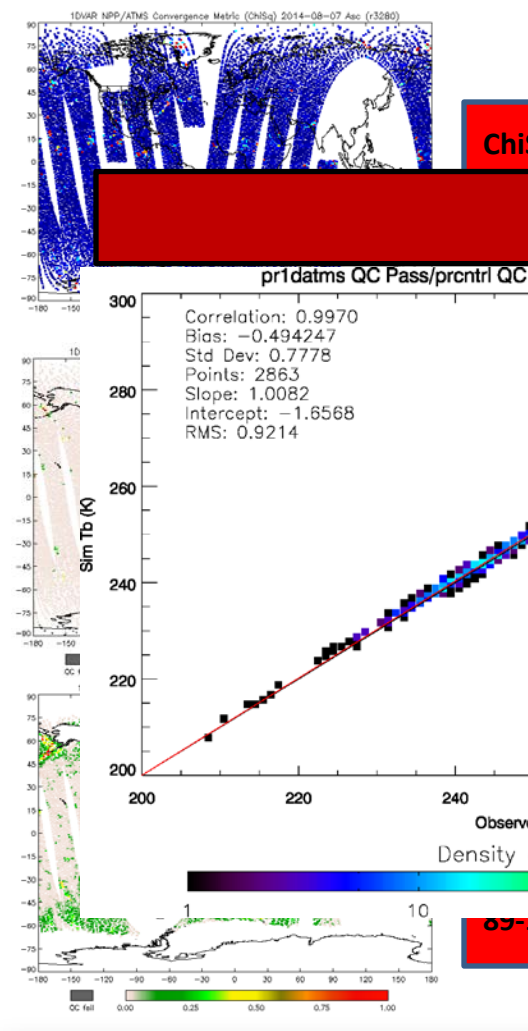

- **GSI r46725, T670/254 (GFS/GDAS)**
 - **PRCN: GDAS/GFS Operational configuration**
 - **PR1D: PRCN + MIIDAPS applied to ATMS only**
- **Summer season**
 - August 1, 2014-September 10, 2014
- **MIIDAPS Applied to ATMS only**
 - ATMS QC based on MIIDAPS output
 - SSMI/S QC still being tuned
 - Use of 1DVAR Geophysical outputs still being explored

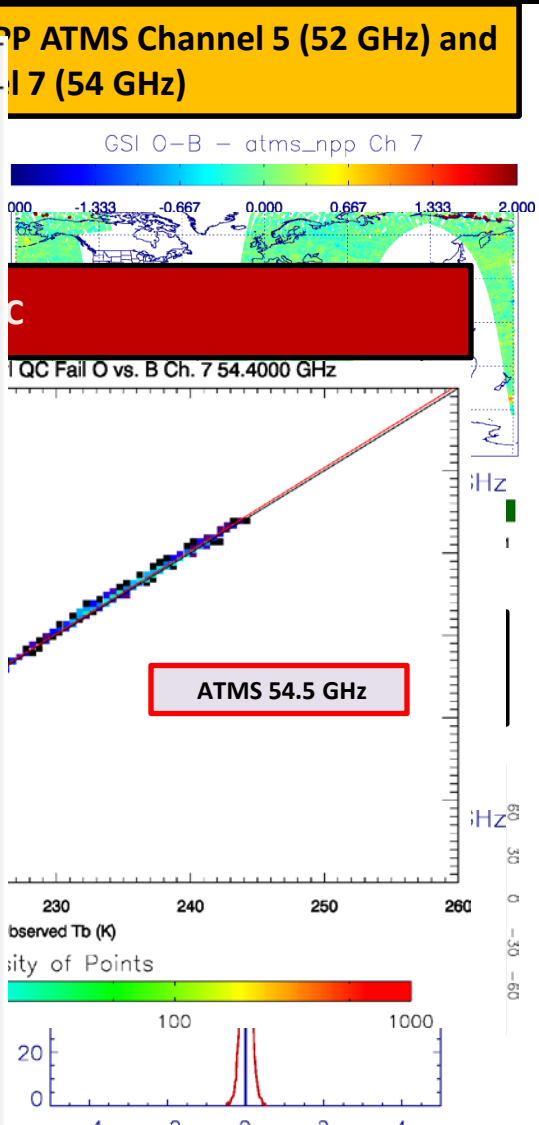

MIIDAPS Analysis Impact

MIIDAPS-based QC Scheme:

Freq	Prcntrl			Pr1datms		
	O-B	O-A	NObs	O-B	O-A	NObs
23	1.66	1.39	5695	1.92	1.69	7328
31	1.04	0.97	5715	1.55	1.43	7197

183	1.01	0.88	4959	1.02	0.89	8063

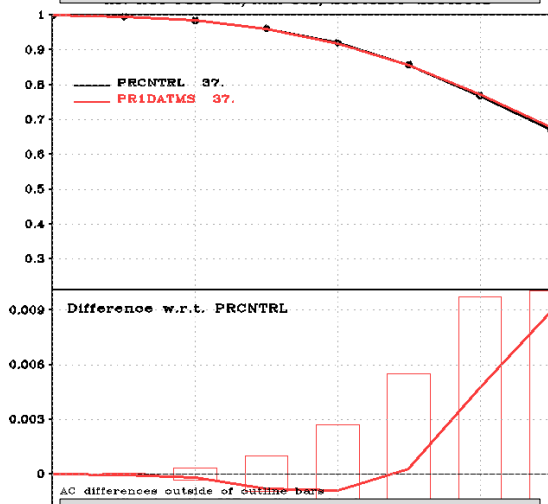

MIIDAPS Forecast Impact

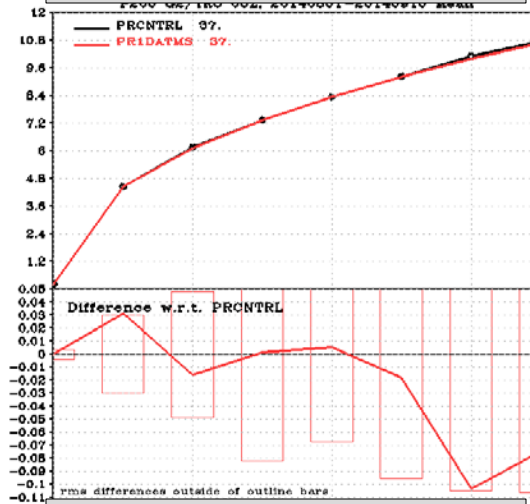

500 hPa Height AC (NH)

500 hPa Height AC (SH)

200 hPa Wind RMSE (TRO)

850 hPa Wind RMSE (TRO)

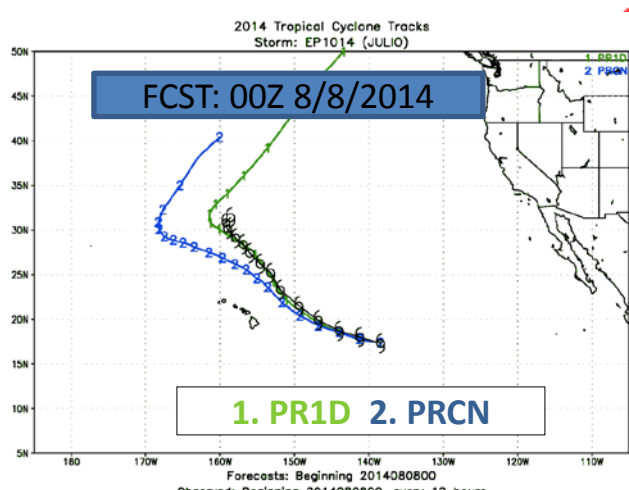

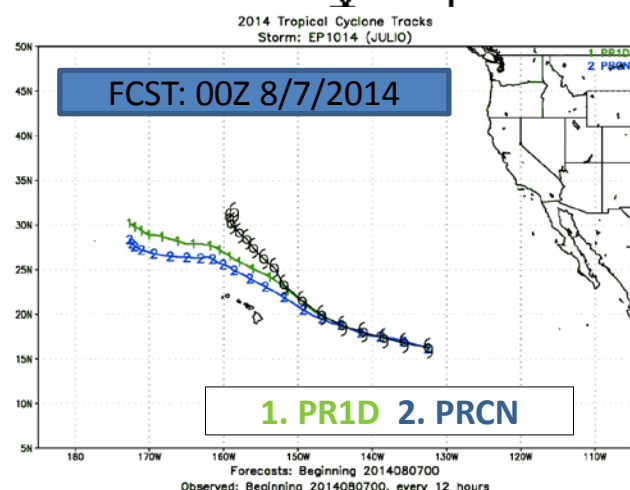

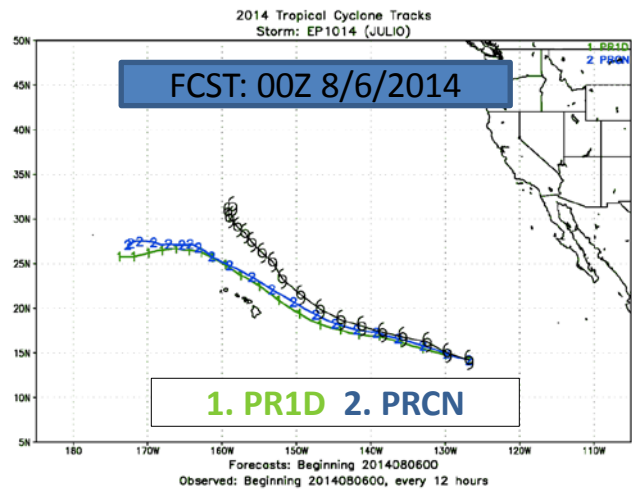

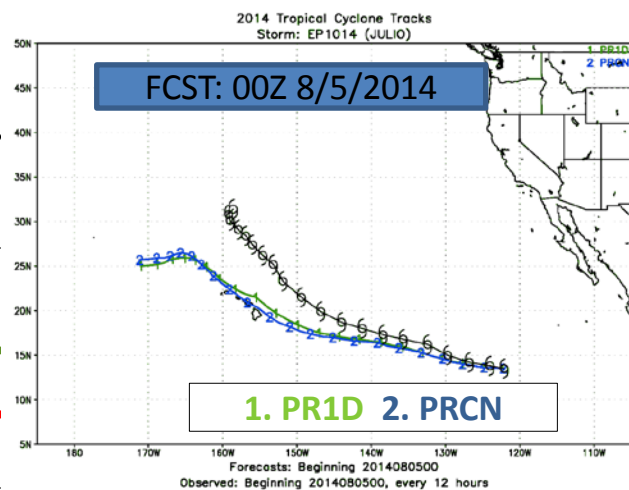

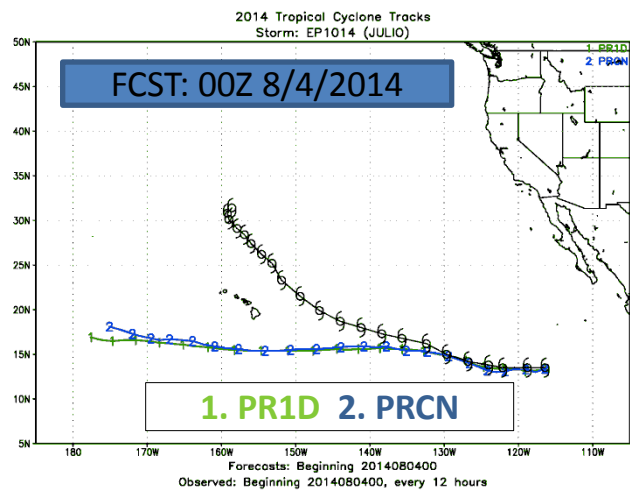

Summary of Impacts

- MIIDAPS applied to just ATMS has neutral impact on traditionally important metrics
- Exploitation of MIIDAPS on all MW, or all MW+IR, will show true utility for QC application
- Further impact expected from utilizing MIIDAPS for hydrometeor and surface characterization, background adjustment

MIIDAPS Forecast Impact

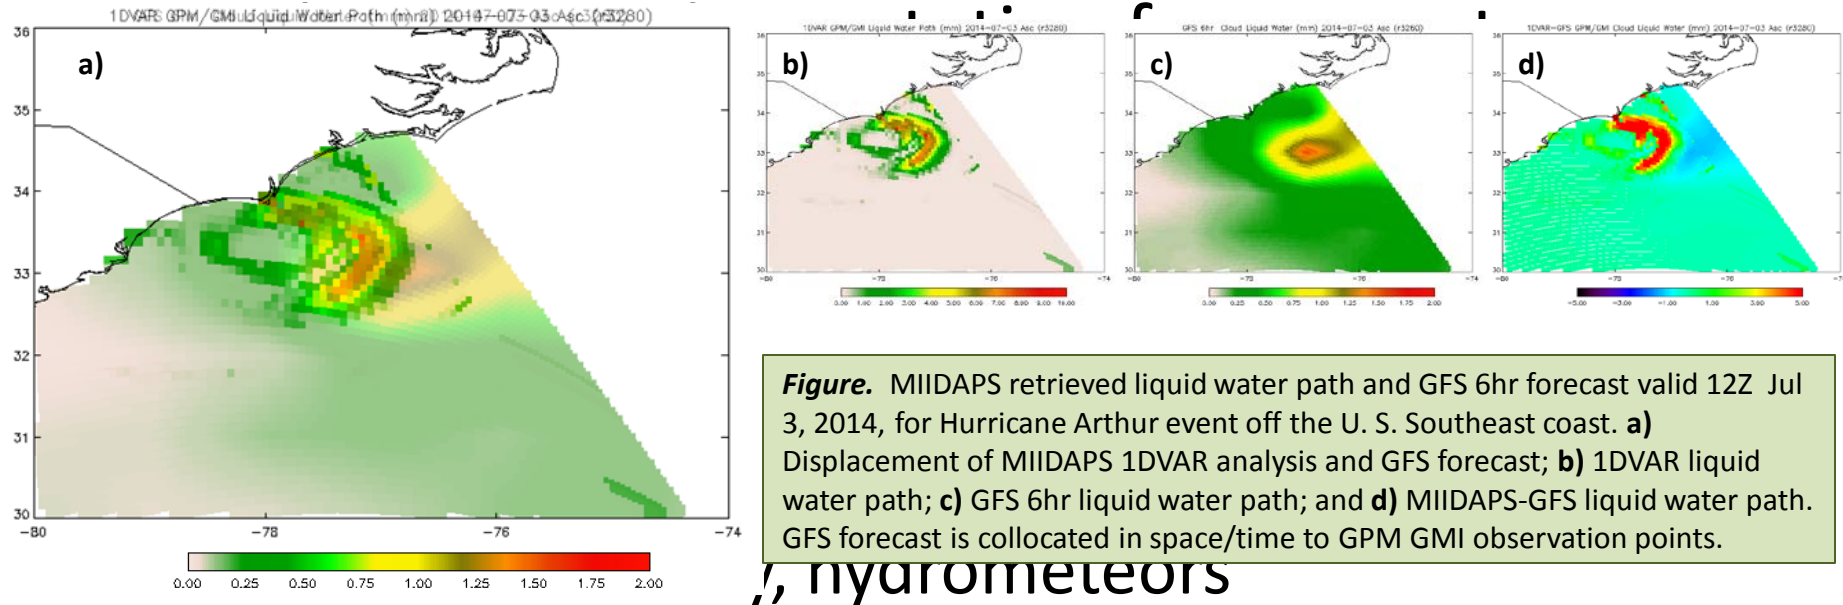

Quick overview of MIIDAPS 1DVAR

Development status

Preliminary analysis and forecast impacts

Future work

Future Work

- Explore use of 1DVAR analysis as background and all-sky radiance assimilation
 - Resolve displacement errors
 - Linearization
