# SSMIS Brightness Temperature Evaluation in a Data Assimilation Context

Collaborators: NRL: Nancy Baker (PI), Clay Blankenship, Bill Campbell. Contributors: Steve Swadley (METOC Consulting), Gene Poe (NRL)

## Summary of Accomplishments

- Worked closely with Cal/Val team to understand assimilation implications of the sensor design and calibration anomalies, and to devise techniques to mitigate the calibration issues.
- Completed code to read, process, and quality control observations, apply scan non-uniformity and spillover corrections, perform beam cell averaging of footprints, and compute innovations and associated statistics.
- Developed flexible interface to pCRTM and RTTOV-7.
- Initial results indicate that pCRTM is performing well.

Future: Real time monitoring of SSMIS TBs. Compare pCRTM with RTTOV-7. Assess observation and forward model bias and errors; determine useful bias predictors. Assess forecast impact of SSMIS assimilation.

Chan.	pCRTM Bias	pCRTM s.d.	RTTOV-7 Bias	RTTOV-7 s.d.
4	1.70	0.54	1.68	0.53
5	1.59	1.00	1.64	0.97
6	1.81	1.24	1.83	1.24
7	3.53	1.34	3.55	1.44

# SSM/IS radiance assimilation in GSI

Period: 00z 10 Aug. - 00z 10 Sep. 2006

NCEP SYSTEM – Kazumori

Assimilation System: GSI 3D-Var

Forecast model: NCEP Operational global model (Sep. 2006)

Resolution: T382L64

Data:

EXPC: Operational

**EXPS**: Operational + UKMO SSMIS data  
(removed flagged data)

## Preliminary Results:

Improved A.C. 500 hPa height in the S.H.

Required further investigation on data quality

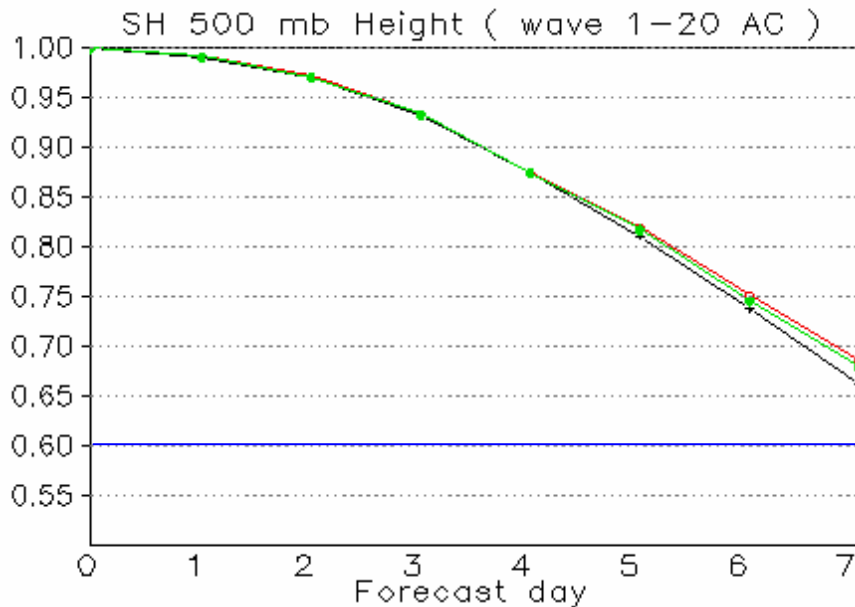

# *NCEP AMSR-E Radiance Assimilation*

## *M. Kazumori*

# AMSR-E radiance assimilation in GSI

Period: 00z 12 Aug. - 00z 11 Sep. 2005

M. Kazumori

Assimilation System: GSI 3D-Var

Forecast model: NCEP Operational global model (May.2006)

Resolution: T382L64

Data:

Control: Operational

Test1: Operational + AMSR-E (FASTEM1)

Test2: Operational + AMSR-E (New EM)

## Results:

Improved A.C. 500 hPa height in the S.H.

Decrease of RMS of surface wind speed analysis increment

# *AIRS Data Assimilation*

# *The Trial*

- Used `full AIRS data stream used (JPL)
  - NESDIS (ORA) generated BUFR files
  - All FOVs, 324(281) channels
  - 1 Jan – 15 Feb '04
- Similar assimilation methodology to that used for operations
- Operational data cut-offs used
- Additional cloud handling added to 3D Var.
- Data thinning to ensure satisfying operational time constraints

# *The Trial*

- AIRS related weights/noise optimised
- Used NCEP Operational verification scheme.

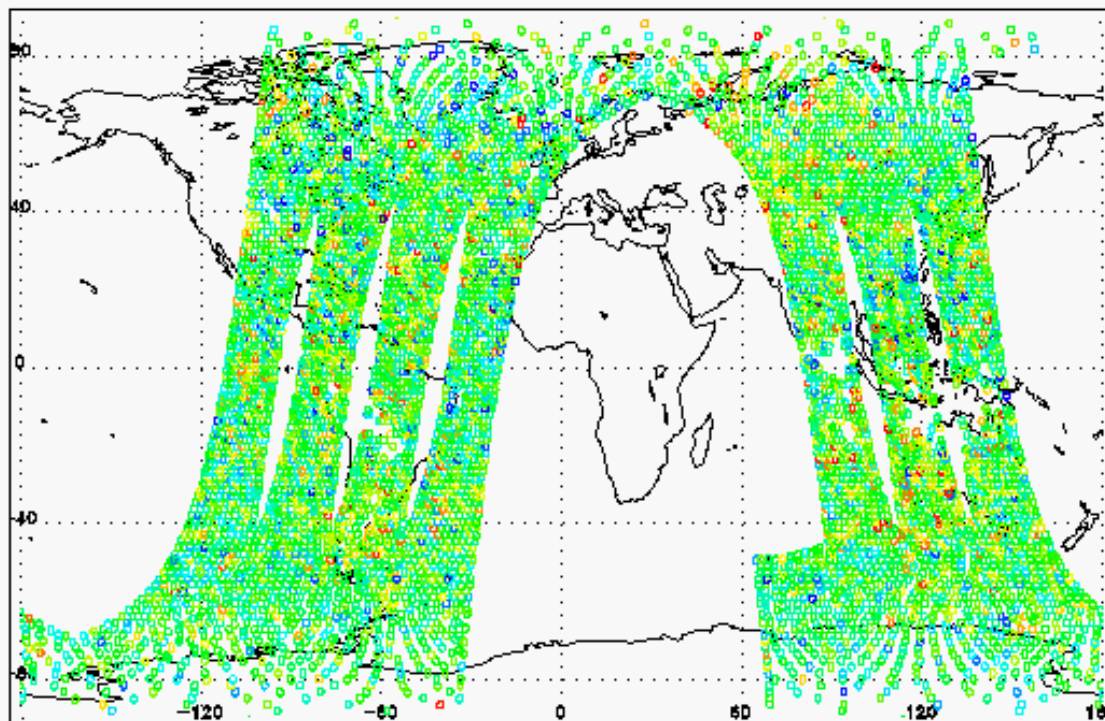

# *AIRS Assimilation*

- Used 251 Out of 281 Channels
  - 73 - 86 Removed (Channels peak too High)
  - 1937 - 2109 Removed (Non LTE)
  - 2357 Removed (Large Obs – Background Diff.)
- Used Shortwave at Night
  - Wavenumber  $> 2000 \text{ cm}^{-1}$  Downweighted during day
  - Wavenumber  $> 2400 \text{ cm}^{-1}$  Removed during day

AQUA AIRS 20040131 06Z  
Observed-Calculated Brightness Temperature with Bias Correction

Channel 051 Freq 661.8 cm<sup>-1</sup> Nobs 7070 Avg. 0.038 Std. 0.73

**AIRS data coverage at 06 UTC on 31 January 2004. (Obs-Calc. Brightness Temperatures at 661.8 cm<sup>-1</sup> are shown)**

## Averaged Emissivity Calculations over Ocean

### AIRS Averaged Surface Emissivity 12.18 Micron

— AIRS Calculated — CRTM Calculated

## **Summary:**

**The introduction of several new types of observational data has been examined by the JCSDA.**

**There have been positive results using the assimilation of SSM/IS and AMSR-E data.**

**AIRS hyperspectral data into environmental prognosis centers has provided improvements in forecast skill.**

**We have also noted the improvement gained from using AIRS at a spatial density greater than that used generally for operational NWP.**

## Summary:

We have also completed some studies to look at the impact of spectral coverage and found for the period studied, use of a fuller AIRS spectral coverage, namely 3.7 to 15.4  $\mu\text{m}$ , provided superior forecasts.

The modelling of surface emissivity in the CRTM and in a number of related studies have also commenced to improve our use of AIRS data over land and ice

## Conclusion

**Given the opportunities for enhancement of the assimilation system and the availability of many different types of satellite data, the results here indicate an opportunity to further improve current analysis and forecast systems. The systems can be improved both through the use of additional data and through the enhancement of the use of current data.**

**Further improvements may also be anticipated through use of data over land, cloudy data and the use of complementary data such as Moderate Resolution Imaging Spectroradiometer (MODIS) radiances to better characterize the AIRS fovs.**
